RIPE / RIPE NCC

RIPE

Operators community

Develops addressing policies

Working group mailing lists

2010 meetings:

Prague 3-7 May

Rome 15-19 November

RIPE NCC

Located in Amsterdam

Not for profit membership organisation

One of five RIRs - distributes IP & ASN

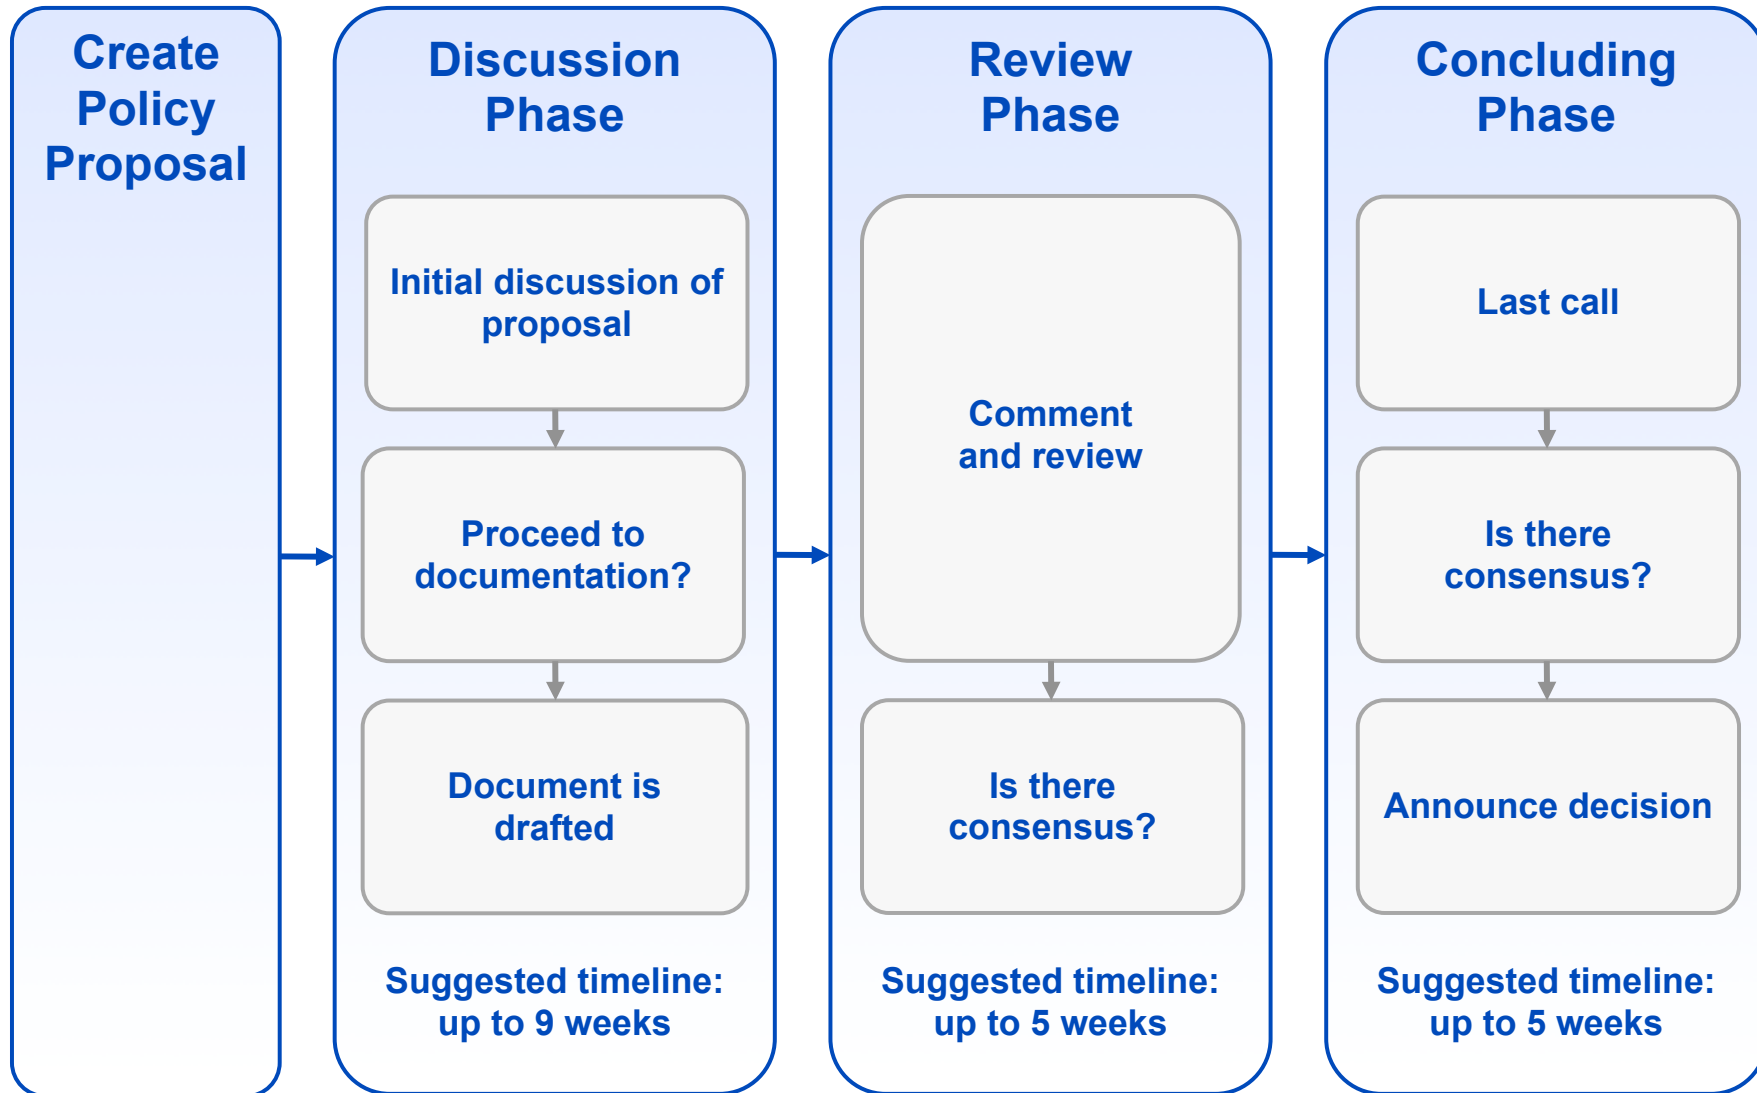

RIPE Policy Development

Why would you want to participate?

- Policy determines how you run your business
- Over 6000 LIRs, however;
 - only a fraction are active participants in the PDP
- RIPE community is open to everyone

- Policies change...
 - due to the change in technology
 - because of different business models

Policy development process

Hot policy topics

- Use of Final /8 (2008-06)
 - new and existing LIRs can receive only one allocation of minimum size at that time
- IPv4 [...] to Facilitate IPv6 Deployment (2009-04)
 - allocations according to demonstrated need, but downscaled with factor 64
 - minimum allocation or PI assignment is /27
 - condition: IPv6 deployment according to RFC5211
- IPv6 allocation size for 6rd (Rapid Deployment)

How can you participate?

- Sign up for the Policy Development Process
Announcement mailing list
- Read the Working Group mail archives
 - RIPE website → RIPE → Mailing Lists
- Come to the RIPE Meetings
 - Two free tickets for new LIRs
 - Remote participation is also possible

Just approved: “Run Out Fairly”

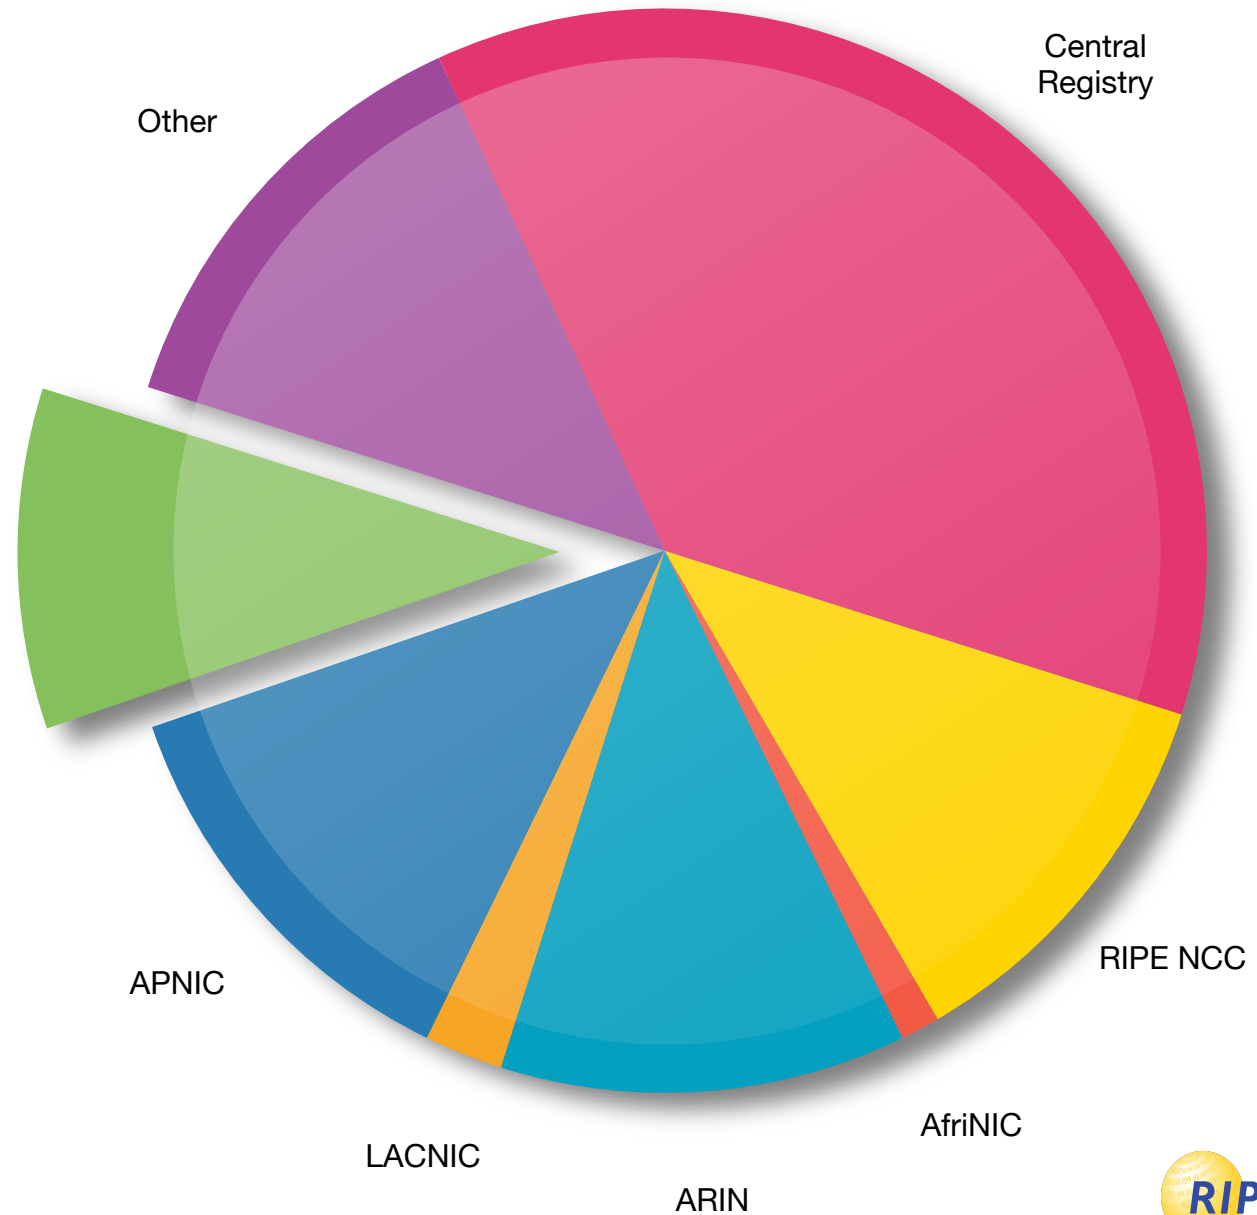

- Warning - sneak preview!
 - real implementation details known in January 2010
- Gradually reduced allocation / assignment periods, for a need of up to...
- ... 9 months (July 2010)
- ... 6 months (January 2011)
- ... 3 months (July 2011)
- In January 2010 - assignments for up to 1 year

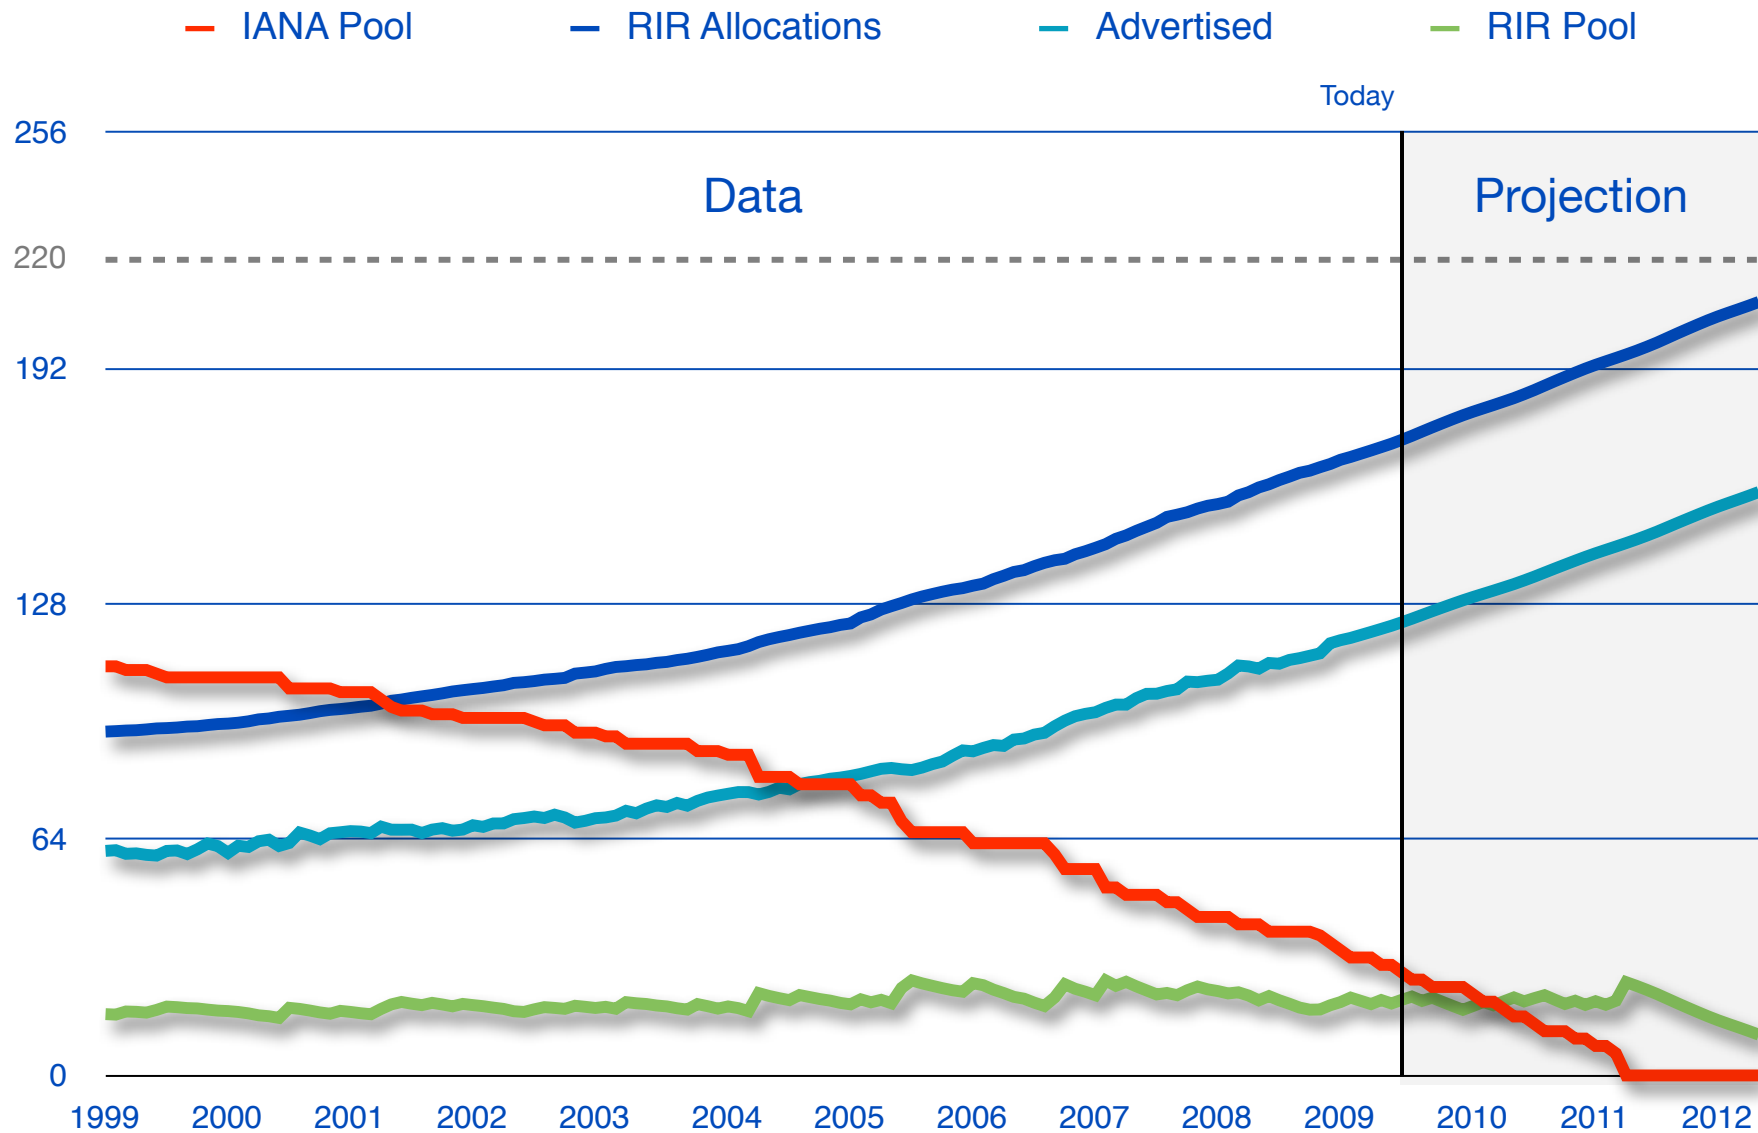

IPv4

IPv4 address pool

10%
available

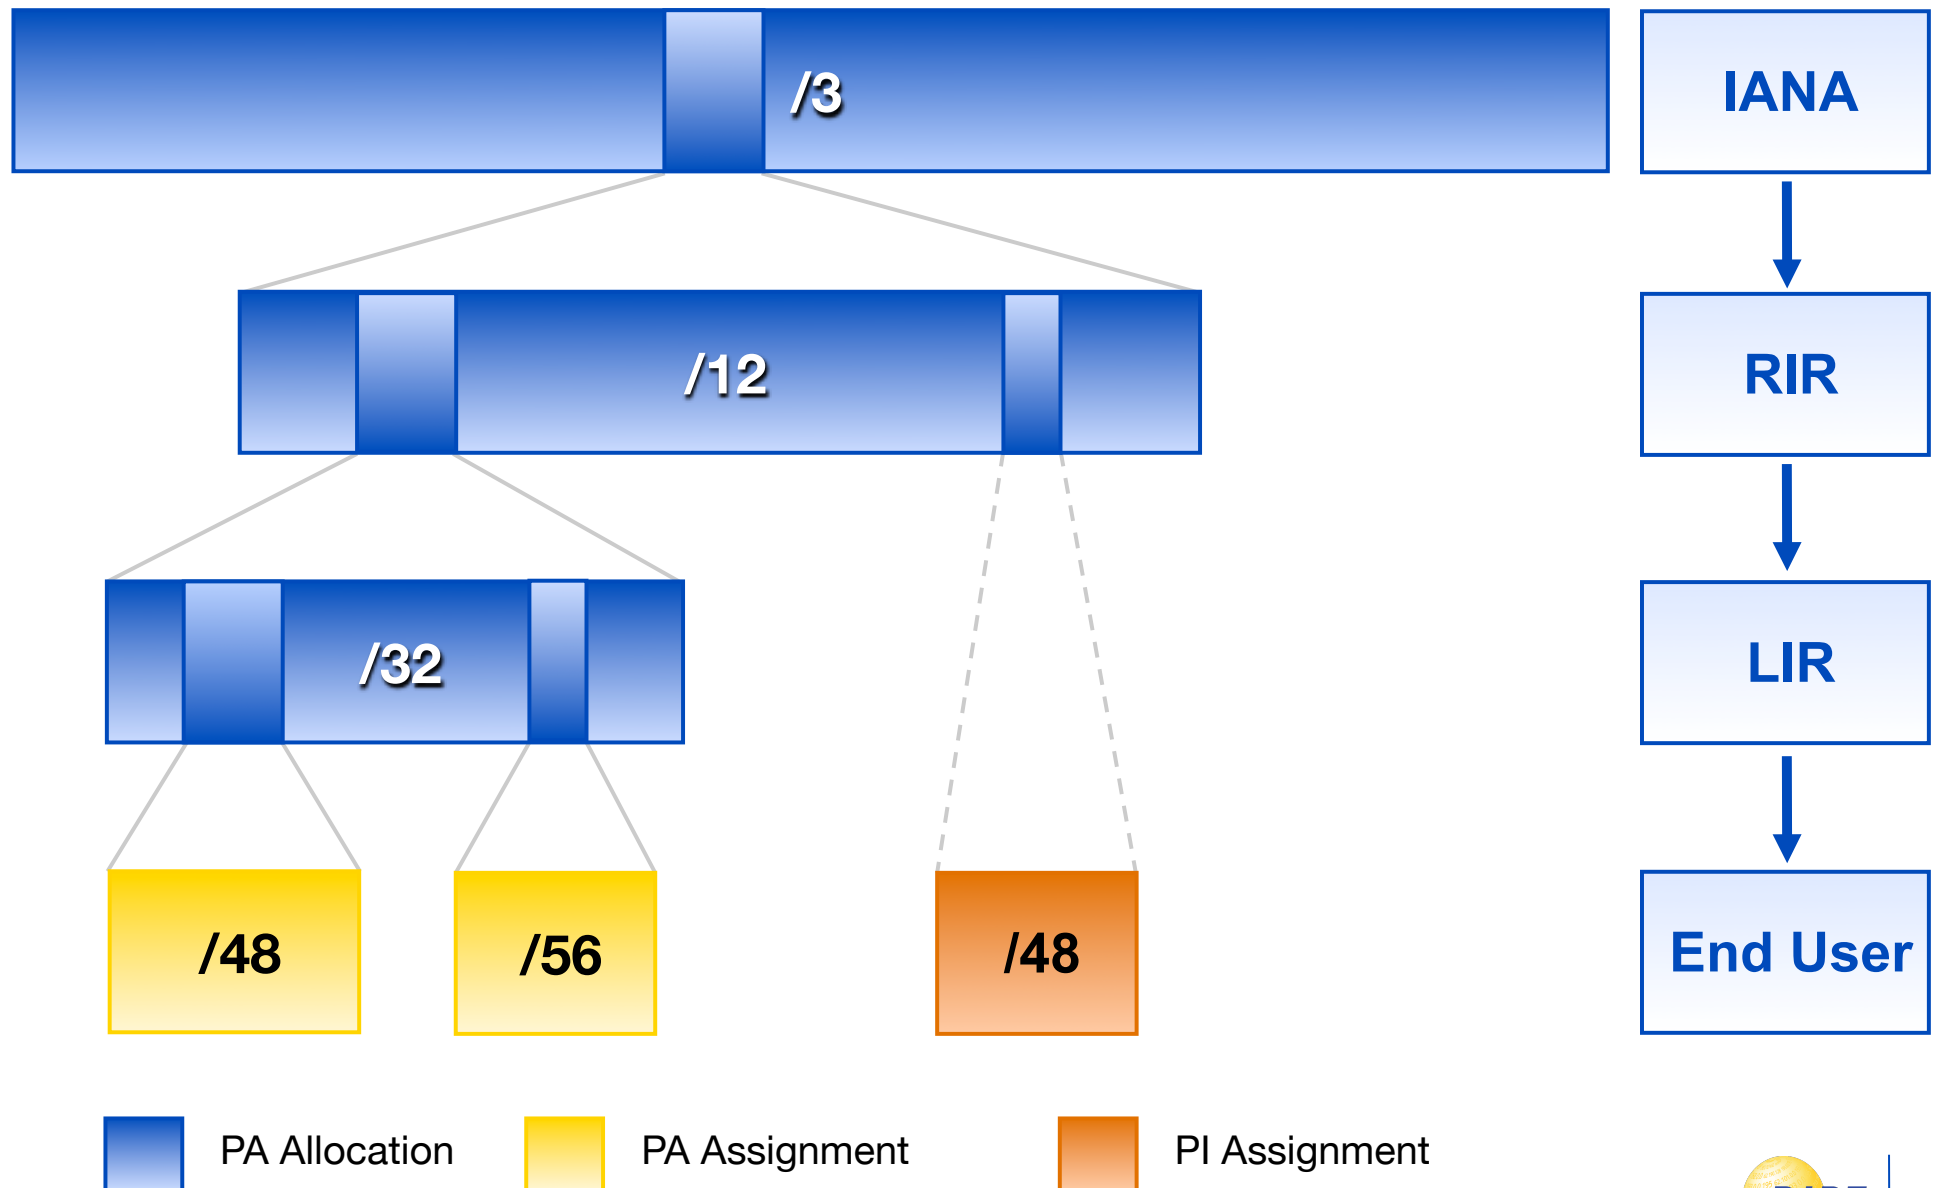

IPv4 address pool - the future?

IPv6

IPv6 address distribution

IPv6 allocations per country

Updated: 10 dec 2009

Getting an IPv6 allocation

- To qualify, an organisation must:
 - Be an LIR
 - Have a plan for making assignments within two years

- Minimum allocation size /32
 - larger allocations require solid justification
 - /29 reserved for growth
 - next allocation criteria: HD=0.96 (37% of /32)

Customer assignments

- Assign to your customers enough addresses
 - /48 = 65,536 subnets
 - /56 = 256 subnets
 - /64 = 1 subnet
 - /128 = one device
 - register in a database accessible by the RIPE NCC
- Make sub-allocations to large customers
 - Service Providers, large enterprises
 - register sub-allocations in the RIPE DB

Getting IPv6 PI assignment

- To qualify, an organisation must:
 - Demonstrate it will multihome
 - Meet the contractual requirements for Independent Resources
- From this week, also for LIRs
 - LIRs must demonstrate special routing requirements
 - Can not be used for sub-assignments to End Users
- Minimum assignment size /48

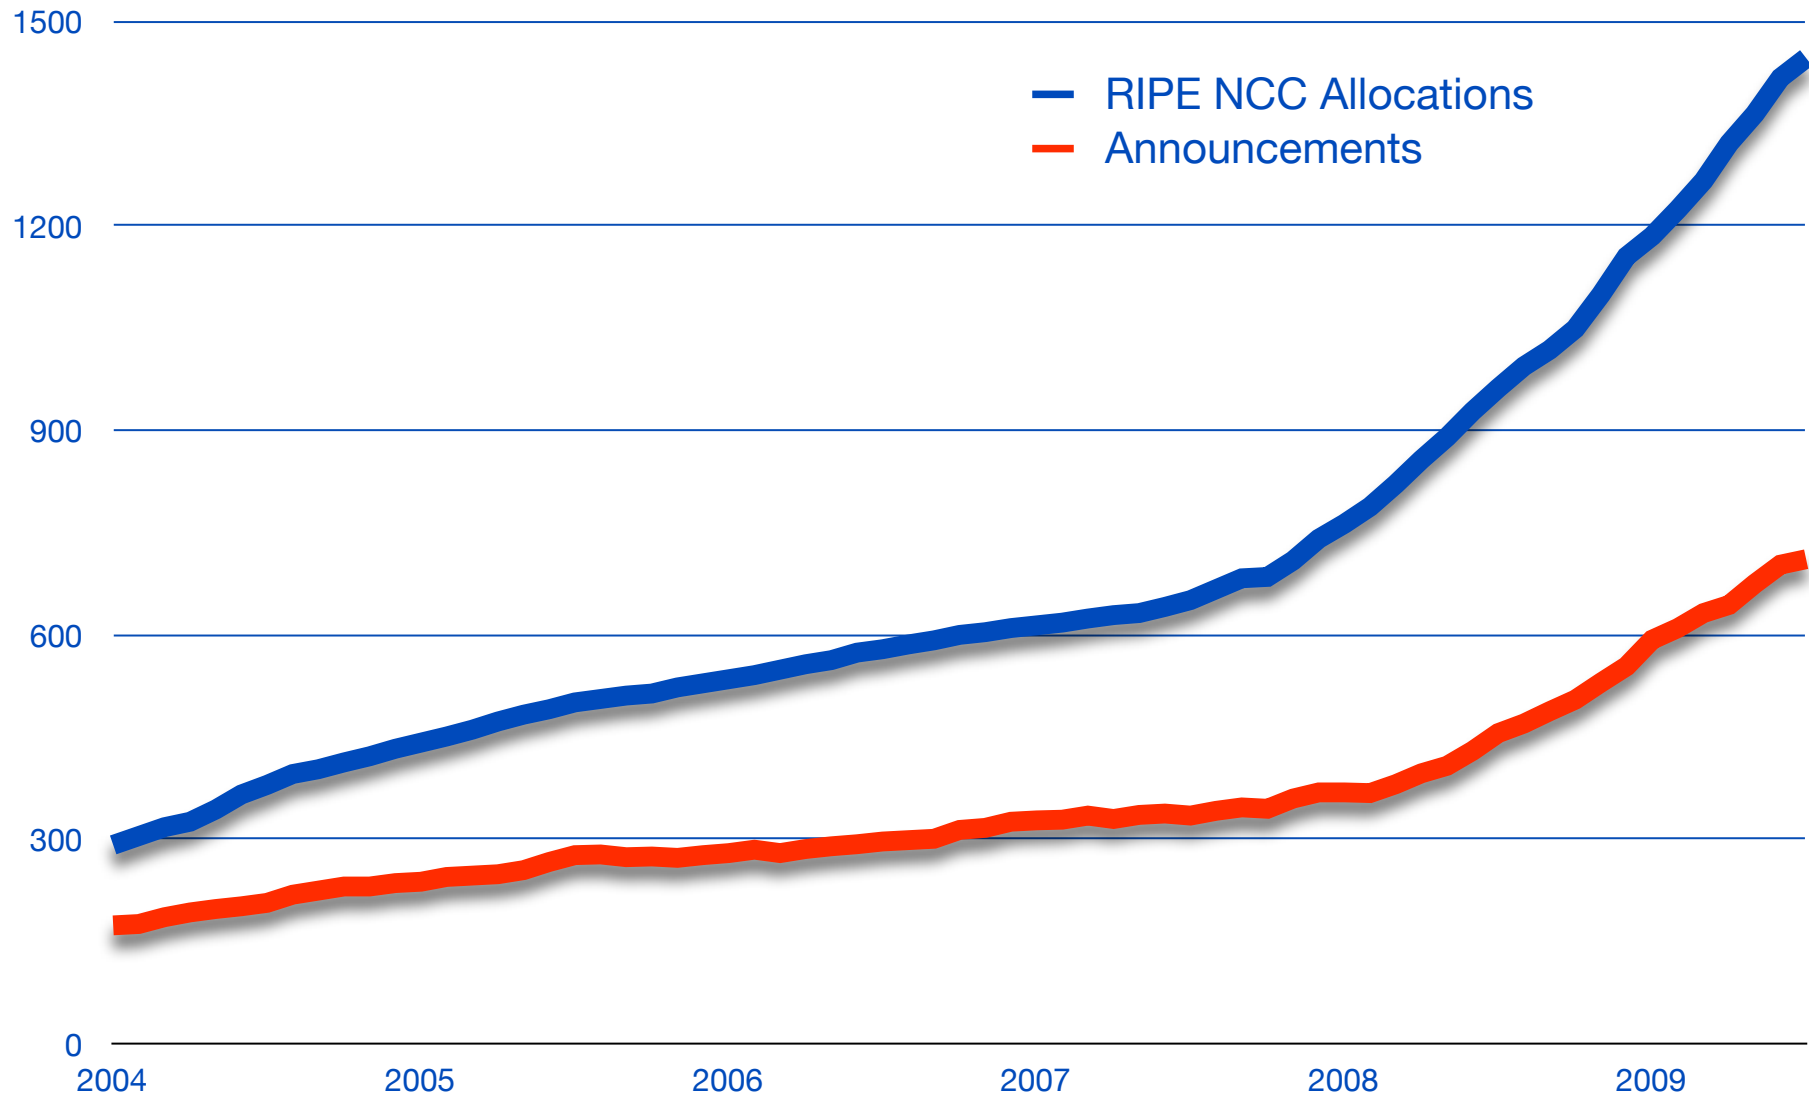

What does an IPv6 space cost?

- IPv6 PA allocation /32 = 1 scoring unit
- points = $\sum(2009-1992) \times (\text{scoring unit}) = 17 \times 1 + \dots$

Category	Points	Fee 2010
Extra Small	0 - 27	€ 1300
Small	- 150	€ 1800
Medium	- 1233	€ 2550
Large	- 8047	€ 4100
Extra Large	> 8047	€ 5500

- PI assignment yearly fee: 50 Euro in 2010

IPv6 allocations and announcements

IPv6 routing

- Announce your whole allocation as one prefix
 - recommended, not mandatory any more
- If announcing several longer prefixes, please follow the BCP (currently being written)
- Create route6 object in RR
- BGP filter recommendations (Gert Doering)
- Global IPv6 routing table: 2500 entries
- Prefixes per country (Gert Doering)

Independent Resources

Independent Resources

- What is considered Independent Resource?
 - made directly from RIPE NCC to End User
 - PI (IPv4, IPv6)
 - ASN
 - IXP IPv6
 - Anycast
- Contract with End User required
 - Example contract on RIPE NCC website
 - and registration from Chamber of Commerce
- Yearly charges for Independent Resources

Requesting Independent Resources

- Sponsoring LIR can request for End User
- Direct Assignment User can request for themselves
- End User can become LIR

- PI assignment - no sub-assigning allowed!
- Often confusion about “portable addresses”
 - PA allocation is also “independent” from other ISPs

Existing assignments: End User choices

- Sign contract with their original LIR
- Find a new sponsoring LIR
- Become an Direct Assignment User and get a
RIPE NCC End User Assignment Agreement
- Become an LIR
- Return the resources

Existing Assignments: LIR's task

- List of independent resources in LIR Portal
- By September, LIRs have marked their:
 - my Infrastructure / my End User
 - not my End User
- All resources not marked are charged to LIR!
- Next step: upload contracts by December 2009
- “Phase 3”, in 2010
 - RIPE NCC will contact “orphanned” End Users

Charging Scheme 2010

- 5 LIR categories: Extra Small to Extra Large
- Category determined by IPv4 and IPv6 allocations over time
- Per category fee in 2010 is the same as in 2009
- New in 2010:
 - Direct assignments don't influence category
 - 50 Euro fee for every direct assignment

32-bit AS Numbers

- 32-bit ASN deployment schedule:
- 1 Jan 2008: 16-bit default, 32-bit on request
- 1 Jan 2009: 32-bit default, 16-bit on request
- 1 Jan 2010: Undifferentiated ASN Pool

Note:

- 16-bit AS Numbers will not be deprecated
- This schedule applies to newly assigned ASNs

32-bit AS Numbers and you

- Can you handle the new format: “AS4192351863”
- If not, please act now!
- Prepare for 32-bit ASNs in your organisation:
 - Check whether your hardware is compatible;
if not, ask your hardware vendor for support
 - Check whether your upstream provider is running compatible hardware;
if not, encourage them to upgrade!

IPv6 Measurements - A compilation

Submitted by mirjam on Wed, 09/12/2009 - 14:14

The increased deployment of IPv6 that has accompanied the exhaustion of the free IPv4 address pool has encouraged a wide range of organisations and individuals to conduct measurements related to IPv6 data and traffic. These studies range from analyses of IPv6 take-up per country and per organisation, to technical examinations of the performance of IPv6-enabled websites.

IPv6 Monitor - An Interview with Alain Durand

Submitted by mirjam on Tue, 08/12/2009 - 12:39

During IETF 74, I sat down with Alain Durand to ask him to explain the type of IPv6 measurements he is doing at Comcast (<http://ipv6monitor.comcast.net>) together with the University of Pennsylvania (<http://mnlab-ipv6.seas.upenn.edu>).

RIPE NCC Upcoming Courses List & Registration

You can register yourself and/or your colleague for any of the available training courses below.

If a course is already closed then please email training@ripe.net to be placed on the waiting list.

Click on the table headers to sort the list by location, type or date.

Course Type v	Status	Location	Date	
IPv6 Training Course	Full	Milan, Italy	Friday, January 15, 2010	Starhotels Splendido
IPv6 Training Course	Register >	Amsterdam, Netherlands	Friday, January 29, 2010	RIPE NCC Office
IPv6 Training Course	Register >	Dubai, United Arab Emirates	Tuesday, February 9, 2010	To be decided
IPv6 Training Course	Full	Moscow, Russian Federation	Friday, February 12, 2010	To be decided
IPv6 Training Course	Full	London, United Kingdom	Wednesday, February 17, 2010	To be decided
IPv6 Training Course	Register >	Stockholm, Sweden	Thursday, February 25, 2010	Hosted by: Netnod
IPv6 Training Course	Register >	Stockholm, Sweden	Friday, February 26, 2010	Hosted by: Netnod
