

# Measuring IPv6 at web clients and caching resolvers

Emile Aben  
[emile.aben@ripe.net](mailto:emile.aben@ripe.net)

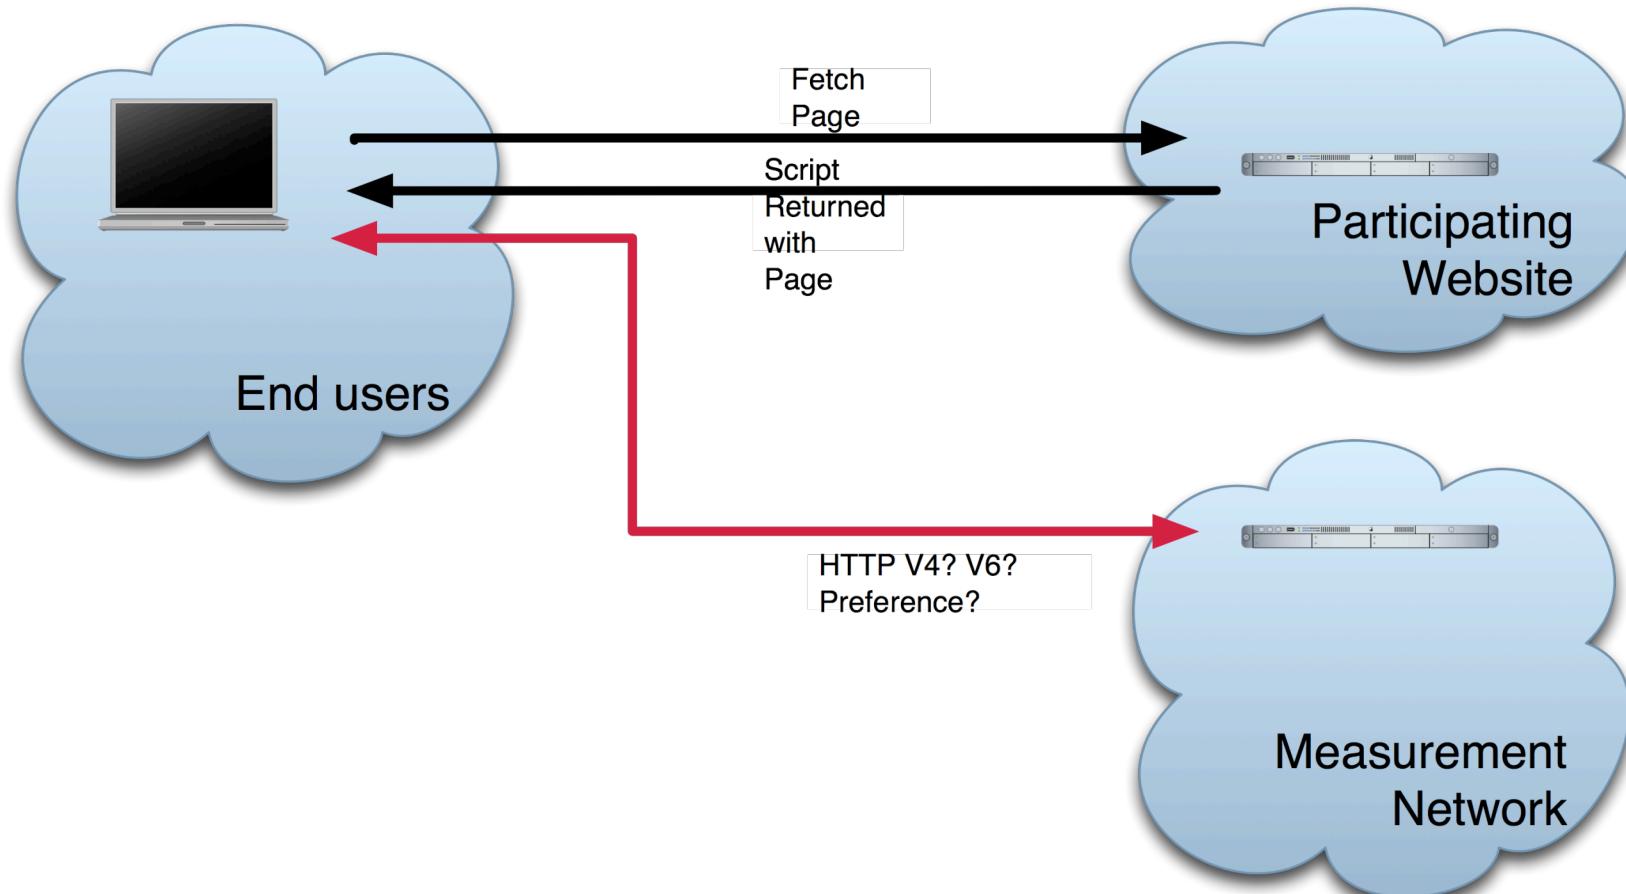

# Introduction

- We want more insight into IPv6 deployment
- IPv6 deployment numbers:
  - Routing table: 6% of ASes
  - Web traffic: 0.25% - 2 % of web clients
- Where is the difference?
- Measure IPv6 connectivity of end-user combined with ISP infrastructure

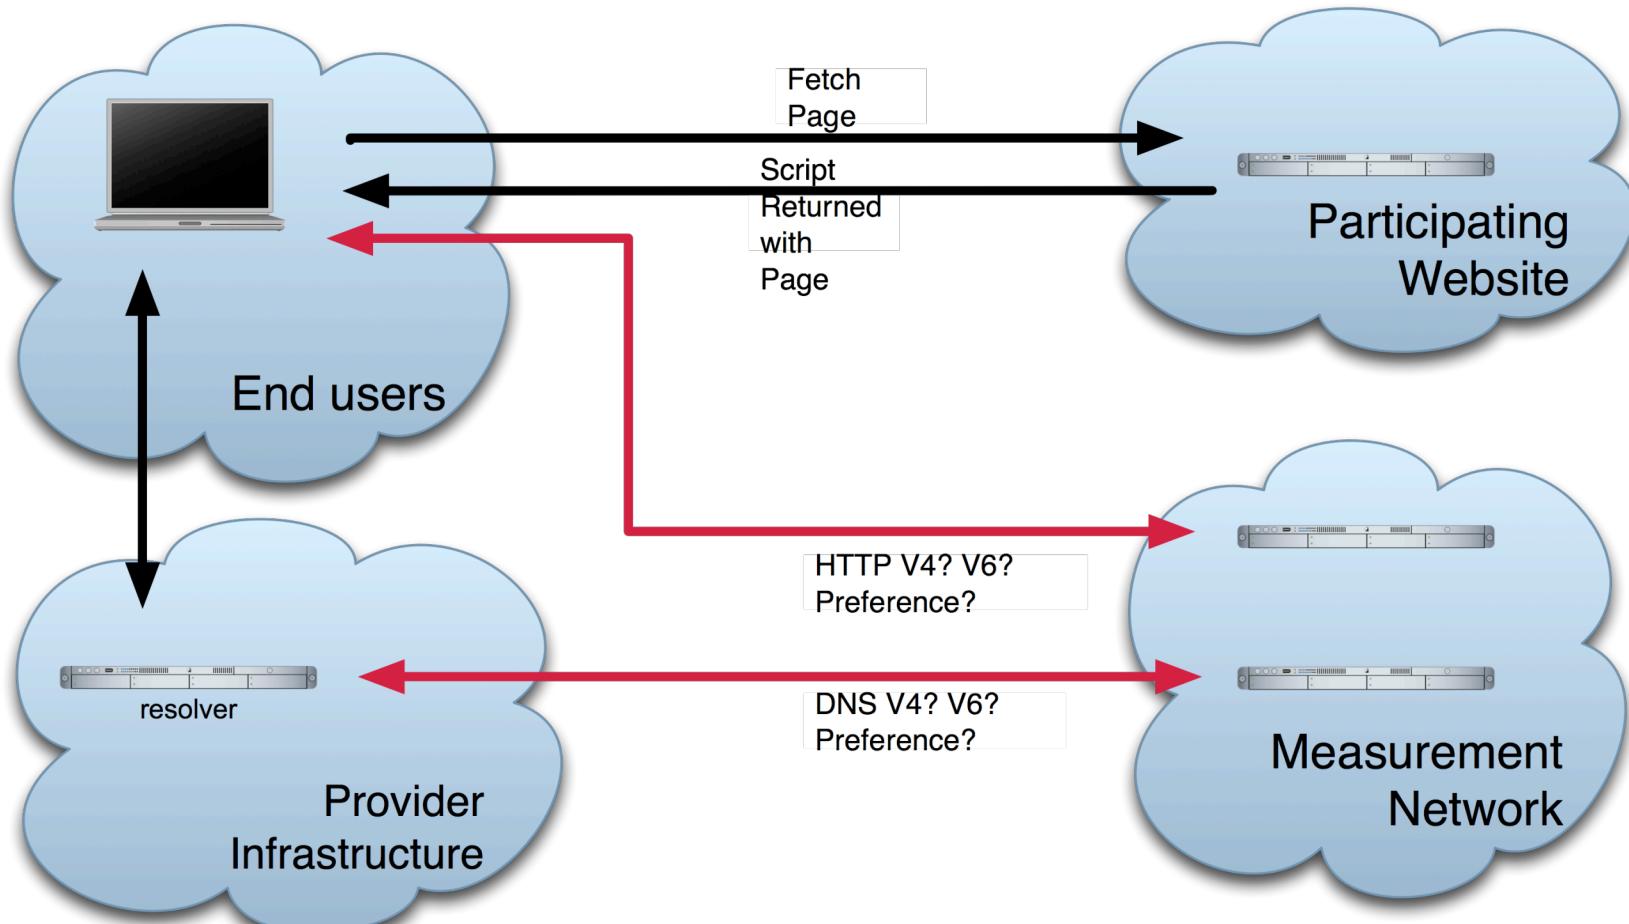

# Measurement start

# HTTP measurements

# DNS measurements

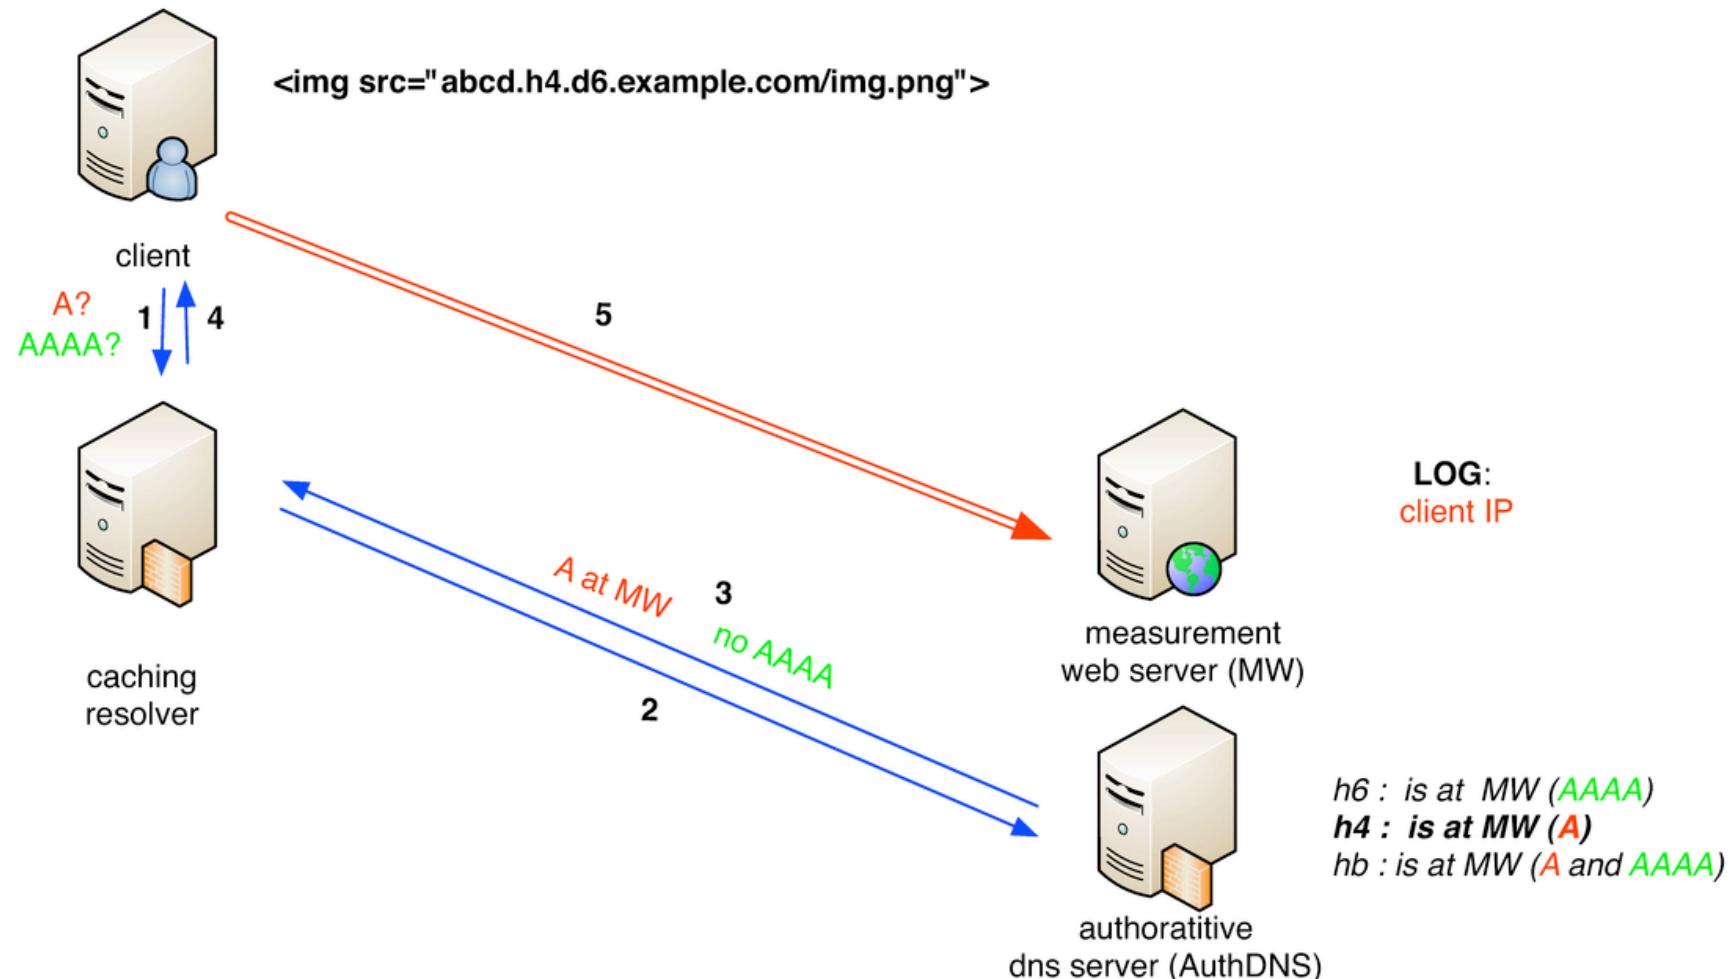

# Measurement step 1: javascript

- Web client visits site ([www.ripe.net](http://www.ripe.net)) and fetches piece of javascript
- Script creates a uniqID and causes 4 image lookups:

```
<uniqID>.h4.d6.example.com/img.png?<uniqID>.h4.d6  
<uniqID>.h6.d4.example.com/img.png?<uniqID>.h6.d4  
<uniqID>.hb.db.example.com/img.png?<uniqID>.hb.db  
<uniqID>.h4.d4.example.com/img.png?<uniqID>.h4.d6
```

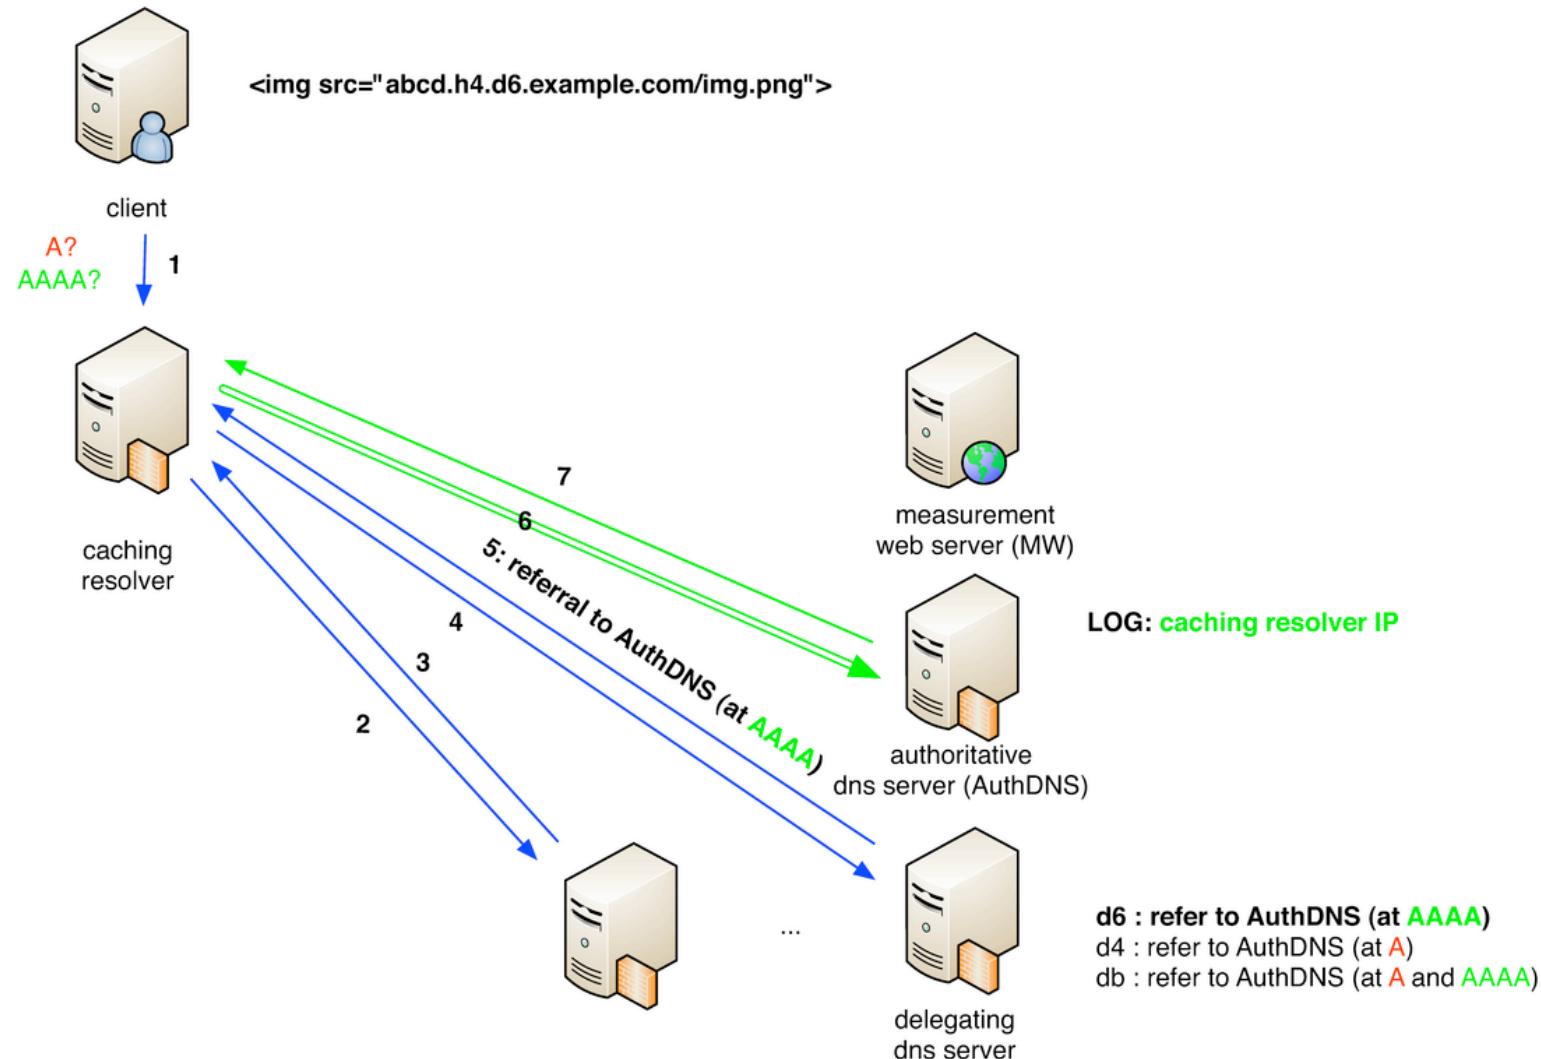

- h-label: HTTP connectivity (h4,h6,hb)
- d-label: DNS connectivity (d4,d6,db)

# Measurement step 3: HTTP

Authoritative DNS server determines IPv4/IPv6 for client-webserver communication

# Measurement step 2: DNS

Delegating DNS server determines IPv4/IPv6 for resolver-authritative DNS communication

# Submeasurements

|              | DNS<br>v4 | DNS<br>v6 | DNS<br>both |
|--------------|-----------|-----------|-------------|
| HTTP<br>v4   | h4.d4     | h4.d6     | -           |
| HTTP<br>v6   | h6.d4     | -         | -           |
| HTTP<br>both | -         | -         | hb.db       |

# Data collected

**HTTP custom logs:**

```
1.1.1.1 1273045440 s514725759.h4.d4.example.com "User-agent"  
1.1.1.1 1273045440 s514725759.h4.d6.example.com "User-agent"  
2010:6:5::1 1273045440 s514725759.hb.db.example.com "User-agent"  
2010:6:5::1 1273045440 s514725759.h6.d4.example.com "User-agent"
```

**DNS query logs:**

```
05-May-2010 09:44:00.531 client 2.2.2.2#30122:      view external: query: s514725759.h4.d4.example.com IN A -E  
05-May-2010 09:44:00.541 client 2.2.2.2#27174:      view external: query: s514725759.h4.d4.example.com IN AAAA -E  
05-May-2010 09:44:00.575 client 2.2.2.2#42035:      view external: query: s514725759.hb.db.example.com IN A -E  
05-May-2010 09:44:00.583 client 2.2.2.2#35884:      view external: query: s514725759.hb.db.example.com IN AAAA -E  
05-May-2010 09:44:00.593 client 2.2.2.2#1925:      view external: query: s514725759.h6.d4.example.com IN A -E  
05-May-2010 09:44:00.606 client 2.2.2.2#6064:      view external: query: s514725759.h6.d4.example.com IN AAAA -E  
05-May-2010 09:44:00.552 client 2010:6:5::2#30403: view external: query: s514725759.h4.d6.example.com IN A -E  
05-May-2010 09:44:00.562 client 2010:6:5::2#38536: view external: query: s514725759.h4.d6.example.com IN AAAA -E
```

**Mix-and-match:**

```
05-May-2010 09:44:00.531 client 2.2.2.2#30122:      view external: query: s514725759.h4.d4.example.com IN A -E  
05-May-2010 09:44:00.541 client 2.2.2.2#27174:      view external: query: s514725759.h4.d4.example.com IN AAAA -E  
1.1.1.1 1273045440 s514725759.h4.d4.example.com "User-agent"  
  
05-May-2010 09:44:00.575 client 2.2.2.2#42035:      view external: query: s514725759.hb.db.example.com IN A -E  
05-May-2010 09:44:00.583 client 2.2.2.2#35884:      view external: query: s514725759.hb.db.example.com IN AAAA -E  
2010:6:5::1 1273045440 s514725759.hb.db.example.com "User-agent"  
  
05-May-2010 09:44:00.593 client 2.2.2.2#1925:      view external: query: s514725759.h6.d4.example.com IN A -E  
05-May-2010 09:44:00.606 client 2.2.2.2#6064:      view external: query: s514725759.h6.d4.example.com IN AAAA -E

```

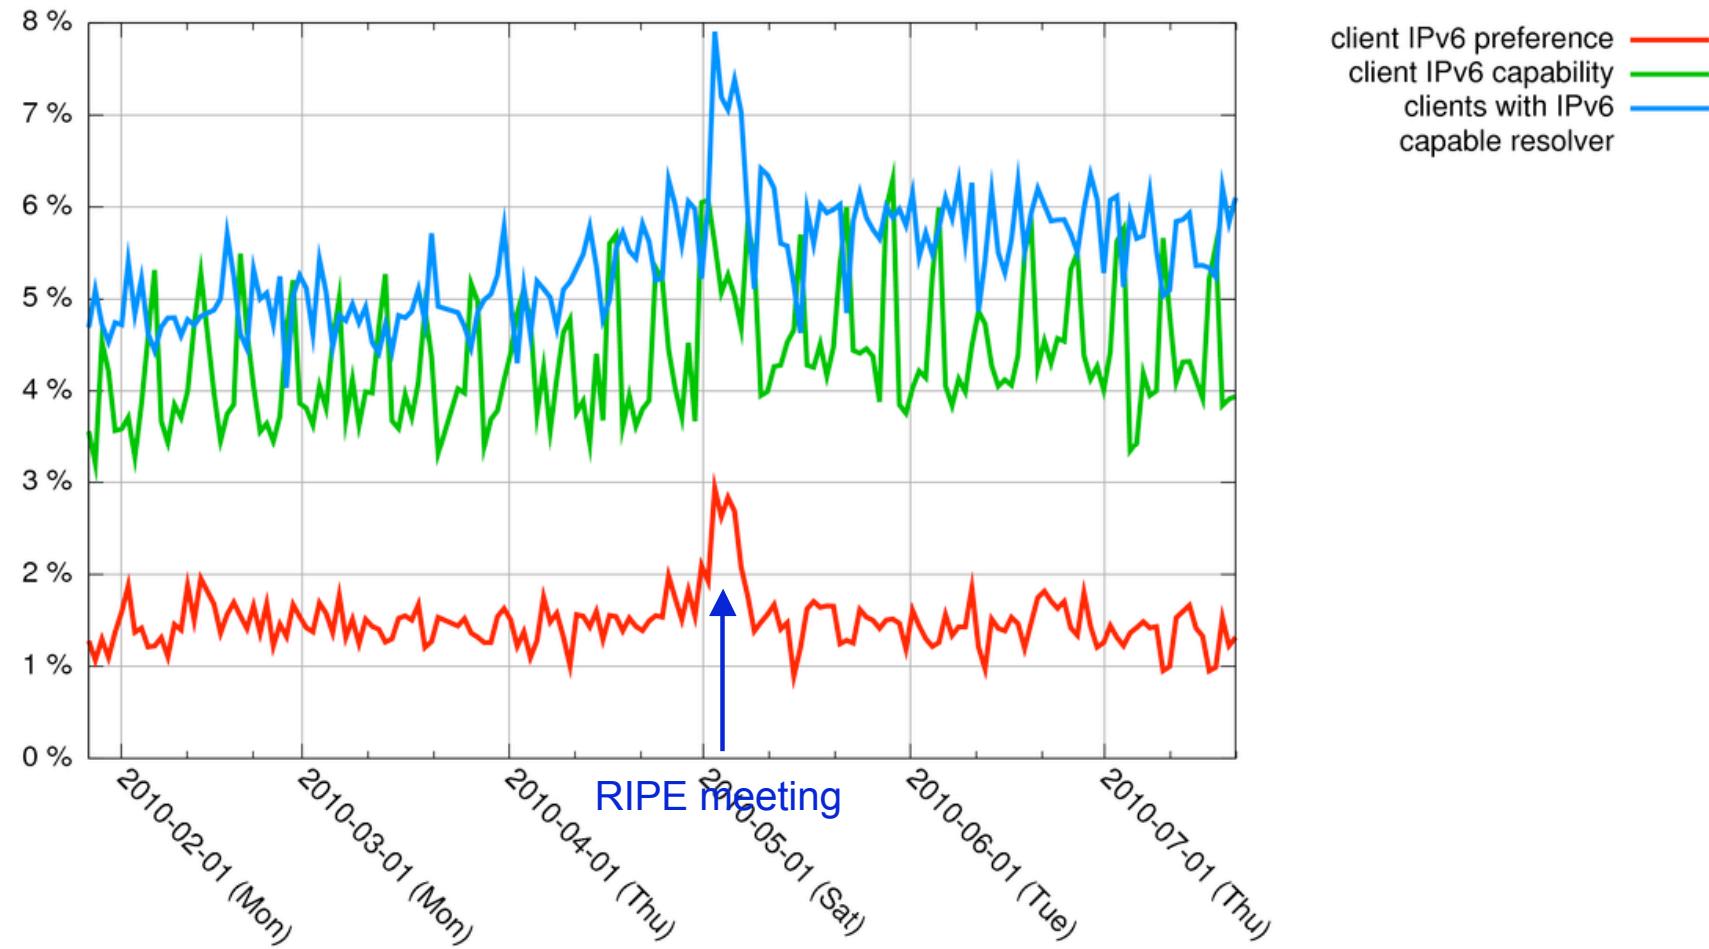

# Details, details

- UniqID in domain name
  - Allows for correlation of the 4 sub-measurements
  - Forces DNS lookup
- Low DNS RR TTL (just to be sure)
- Measurements are limited to 1 run of the script per day per client
- Local (NCC) traffic filtered out
- Measurement bias on clients:
  - Only visitors to site that hosts measurement-script
  - Clients that use javascript (>95%)

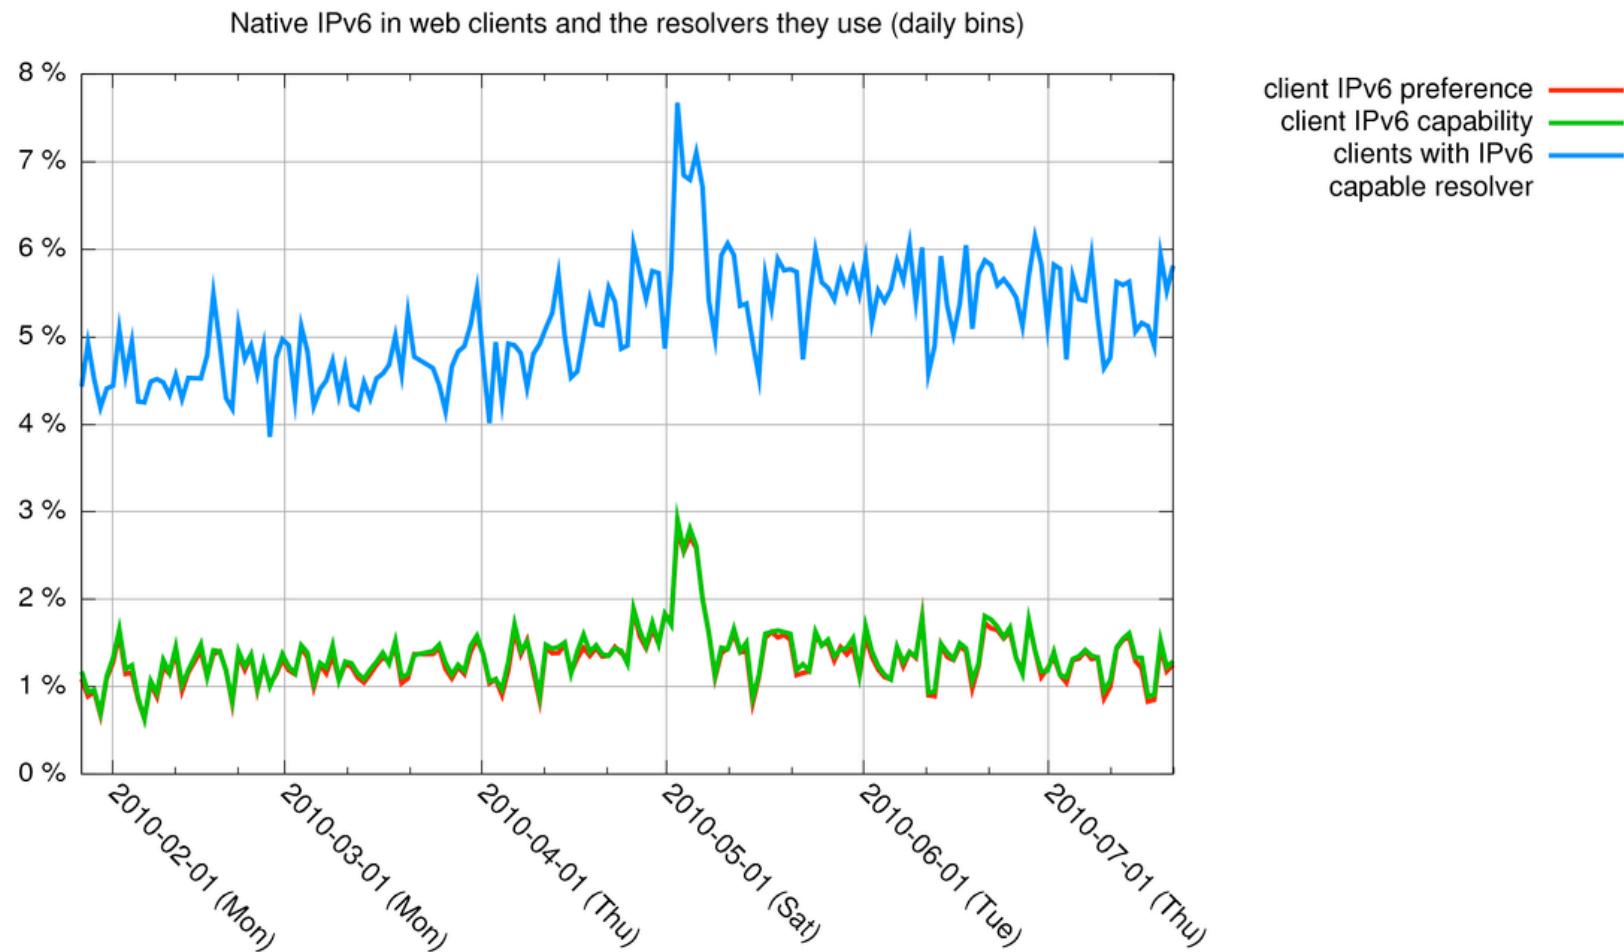

# Measurement results

# IPv6 for clients/resolvers for www.ripe.net

IPv6 in web clients and the resolvers they use (daily bins)

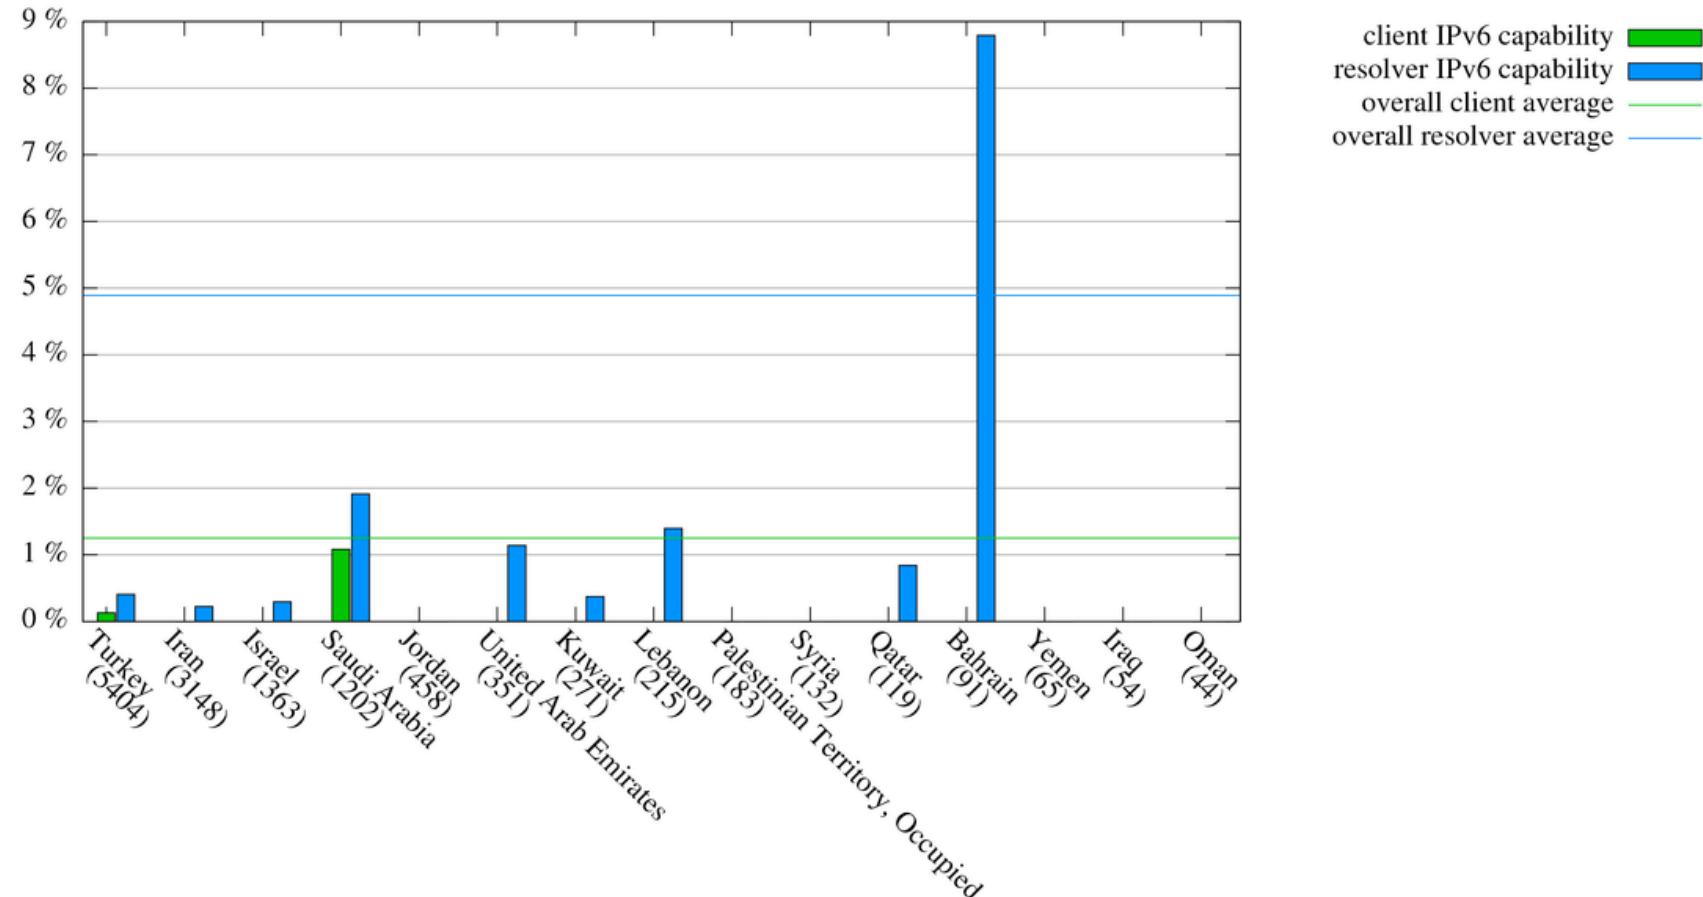

# “Native” IPv6

Native: not-autotunneled (ie. No Teredo, 6to4)

# Native IPv6 at country level

Native IPv6 in web clients and resolvers they use (Middle East)

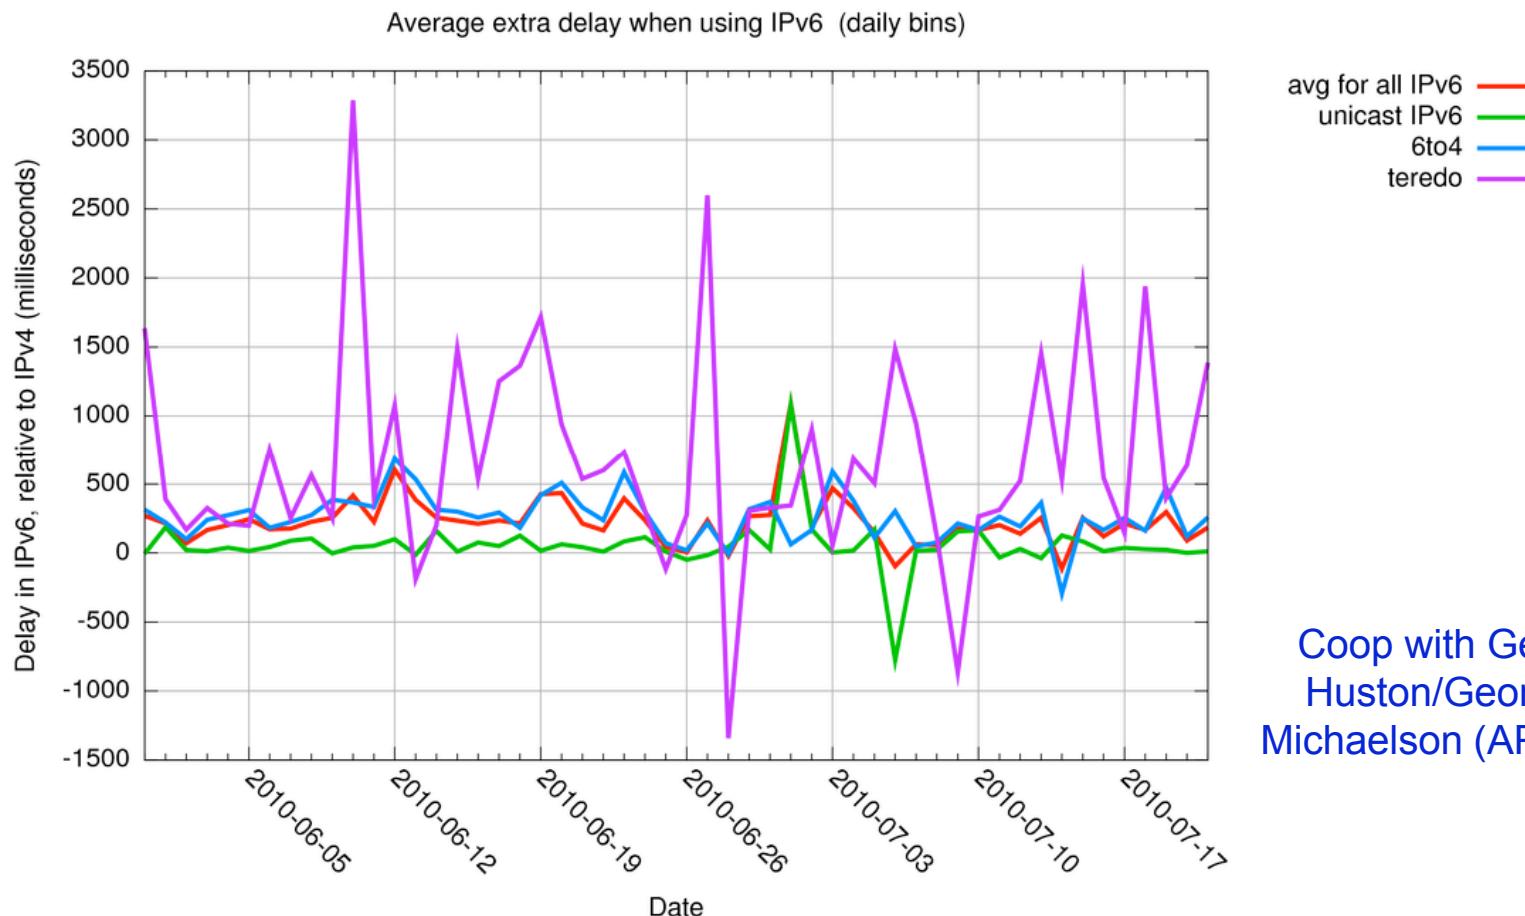

Native: not-autotunneled (ie. No Teredo, 6to4)

## And at the AS level

| May 2010              | Total | IPv6 | %IPv6 |
|-----------------------|-------|------|-------|
| ASes with resolvers   | 12021 | 591  | 4.9%  |
| ASes with web clients | 13690 | 530  | 3.8%  |
| Compare to:           |       |      |       |
| ASes seen in RIS      | 34563 | 2125 | 6.1%  |

Indication of populations at various stages of deployment

# IPv4/IPv6 performance clients/resolvers to www.ripe.net

Coop with Geoff  
Huston/George  
Michaelson (APNIC)

Transition technologies have serious performance impacts:  
Do you want your clients to encounter delays like this when going to an IPv6 website?

# Same AS?

- Are things in the same AS?

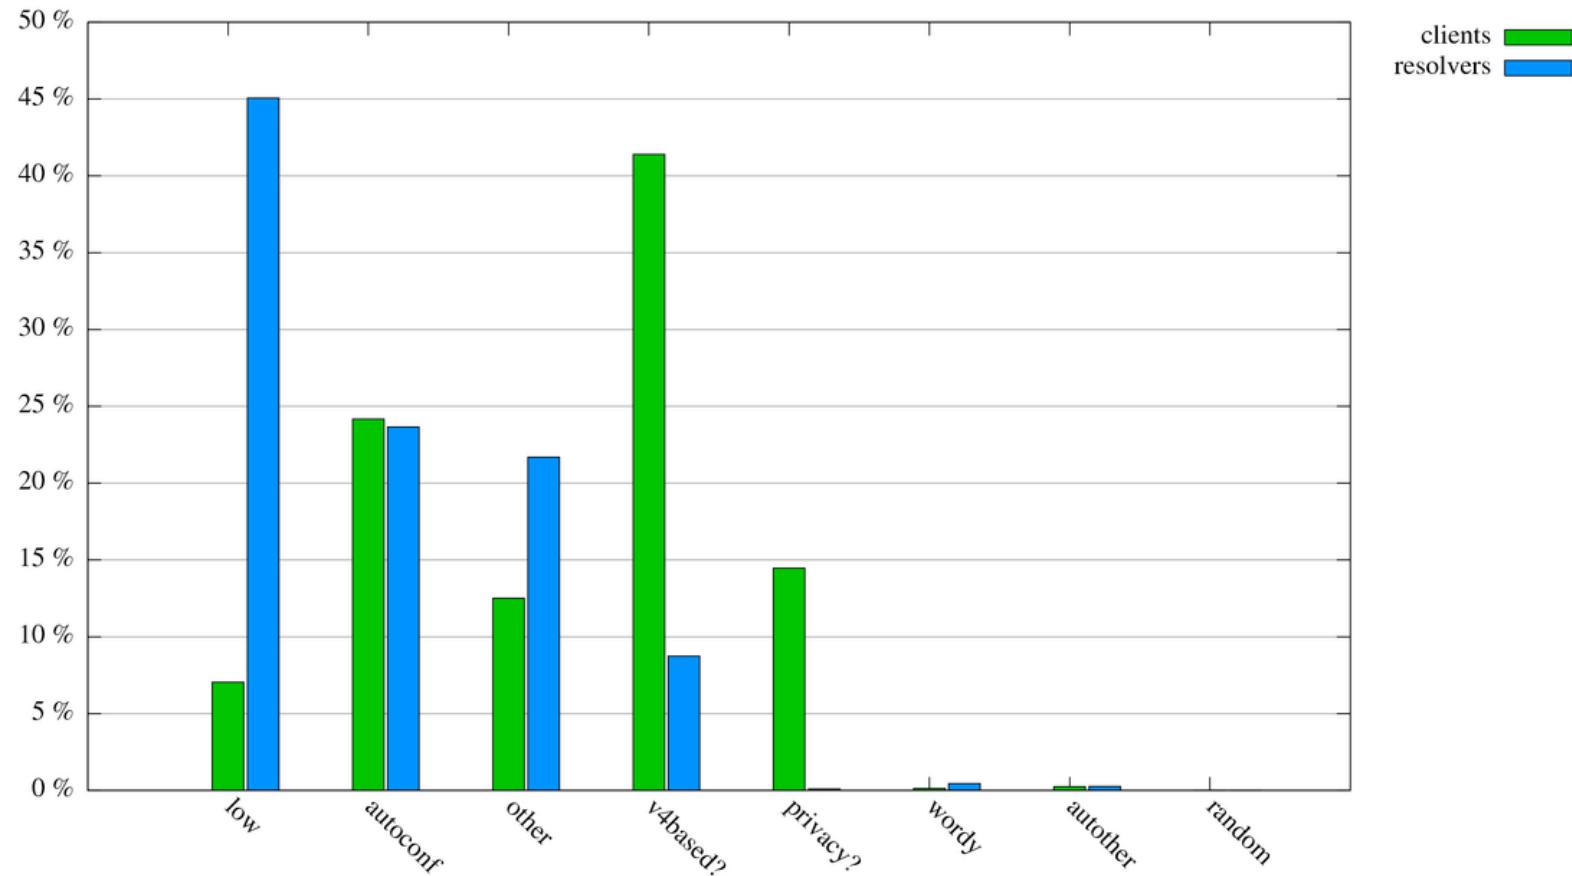

|                  |                  | n    | Same AS    | Different AS | Mixed AS |
|------------------|------------------|------|------------|--------------|----------|
| v4 HTTP          | v6 HTTP (native) | 8k   | 64%        | 36%          | N/A      |
| v4 HTTP          | v4 DNS           | 520k | <b>79%</b> | 19%          | 2.2%     |
| v6 HTTP          | v4 DNS           | 25k  | 20%        | <b>76%</b>   | 4.2%     |
| v6 HTTP (native) | v4 DNS           | 8k   | <b>61%</b> | 36%          | 2.4%     |
| v4 HTTP          | v6 DNS           | 31k  | <b>61%</b> | 38%          | 0.6%     |
| v4 HTTP          | v6 DNS (native)  | 29k  | <b>64%</b> | 35%          | 0.5%     |

# Random facts

- Googlebot does javascript
- In 5% of measurements we see 2 large providers of DNS services cause clientAS != resolverAS
- At least 10% of client v4 AS != client v6 AS caused by ASes involved in tunnel brokering

# Host IDs

IPv6 hostIDs in web clients and the resolvers they use (March 2010)

Classification method: David Malone, PAM 2008

# What's next

- Keep this running, we live in interesting times
- We want more data, on Joe Average Internet user in specific regions
  - You can participate!
  - hosting a piece of javascript on a webpage
  - Ask me ======>
  - Questions, comments?
  - emile.aben@ripe.net

# Questions?

# Within the AS

CDF of v6/v4 ratio for measurements in ASes where we detect both v4 and native v6 capabilities  
 (ASes with 50+ hits on v4 or v6)
