The Internet Landscape in Romania

As seen by the RIPE NCC

RIPE NCC

- - K-root
 - **RIPE Atlas**
 - **RIPEstat**
 - RIS
- Involved in public policy discussions and Internet governance

Gergana Petrova | RONOG 7 | 29 September 2022

One of five Regional Internet Registries in the world Also provide a number of technical services and tools

- Showcase RIPE NCC data and measurement platforms
- Bring value to local technical communities
- Support Internet development throughout service region
- Inform public policymaking

RIPE NCC Internet Country Reports

- Nine reports so far
- Latest report published May 2022
 - https://labs.ripe.net/countryreports/
- Covers Romania, Moldova and Bulgaria
- Translation in Romanian

Market Development Challenges

- Losing skilled ICT workers to emigration
- Relatively low levels of Internet use compared to the rest of Europe
- Large urban-rural digital divide
- Relative lack of digital services such as e-government

Market Development

- Healthy levels of market competition
 - The incumbent market share in Romania is one of the lowest in the EU, at 17%
- Low Internet access prices
- Fast Internet speeds
- 10th globally for fixed broadband speeds New investments made in both infrastructure and updated digital regulation

Figure 1: Number of Local Internet Registries over time

😼 Bulgaria 🚺 Moldova 😨 Romania									
	2004	2005	2006	2007	2008	2009	2010	2011	2012
0									
100						****		••••••	
200)								
300									
400									
500)								

- More LIRs more diversified market
- Not always:
 - More non-ISP LIRs
 - Members with multiple LIR accounts

- Correspond to population
- Fair bit of consolidation

Figure 4: Top 3 IPv4 holders

Figure 5:

IPv4 transfers within, into and out of Bulgaria, Moldova and Romania between October 2012 and March 2022

Figure 9: IPv6 capability over time

- Just because organisations have it, doesn't mean they use it
- RO & BG route 44% of their IPv6 blocks
- Very little market consolidation in IPv6
- RO was previously world leader, now lags behind world average

- Used Routing Information Service (RIS)
- In RO less prominent clustering of local networks around the larger providers compared to BG & MD
- More networks with a direct connection to a major international provider

)

11

Figure 15: **Romania's international connectivity**

- Variety of upstream providers for the local ISPs Vodafone Romania relies exclusively on its parent company
- High number of different available paths

Figure 17:

K-root locations reached from vantage points in Bulgaria, Moldova and Romania

- Some probes in RO reach the K-root instance in Sofia
- Probably not following the shortest path, but are instead being routed via an exchange point abroad before reaching Sofia

14

Figure 19:

Paths between origin and destination in the same country for Bulgaria, Moldova and Romania (IPv4)

Most domestic traffic stays inside each country

RPKI uses digital certificates called ROAs (Route Origin Authorisations) to prove a resource holder's right to announce IP prefixes

Conclusion

- Healthy market competition
 - Some of the lowest access prices and fastest speeds in Europe
- Biggest exporter of IPv4 addresses in the RIPE NCC service region
- Further IPv6 deployment to accommodate future growth
- Routing is generally optimised
- Diversity in international connectivity

See you at RIPE 85!

 RIPE 85 will be a hybrid meeting in Belgrade from 24-28 October

https://ripe85.ripe.net/

Remote attendance is free and you don't have to attend the entire week

Gergana Petrova | RONOG 7 | 29 September 2022

Belgrade, Serbia 24 - 28 October 2022

NOGs Participants Survey

- Takes 5-7 mins!
- Your views on:
 - Channels to stay connected
 - Important topics for NOGs to discuss
 - Challenges that prevent you from attending NOGs
