

arnes

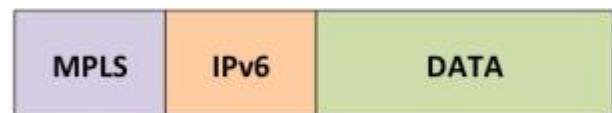

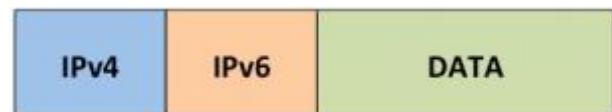

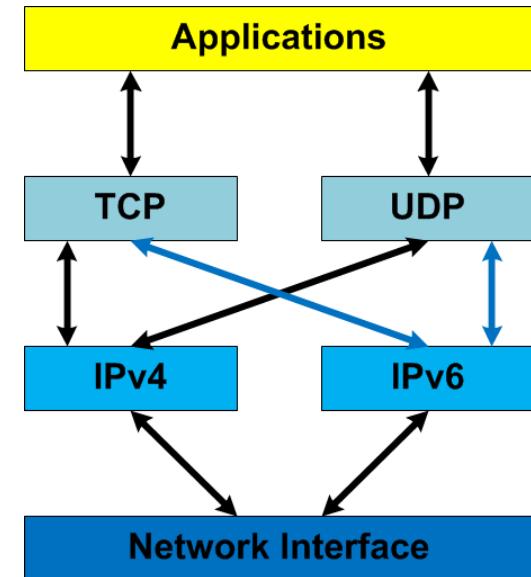

IPv4/IPv6 Transition Mechanisms

Luka Koršič, Matjaž Straus Istenič

IPv4/IPv6 Migration

- Both versions exist today simultaneously
- Dual-stack
 - IPv4 and IPv6 protocol stack
- Address translation
 - NAT44, LSN, NAT64
- Tunneling
 - IPv6 over IPv4 (RFC 2893)
 - IPv6 over GRE (RFC 2473)
 - IPv4-compatible addresses (RFC 2893)
 - IPv6 address is calculated from IPv4 address (::192.168.100.1)
 - 6to4 (RFC 3056)
 - 6rd – IPv6 Rapid Deployment (RFC 5569)
 - ISATAP (RFC 5214)
 - Teredo – NAT traversal (RFC 4380)
 - MPLS
 - 6PE (RFC 4798)
 - 6VPE (RFC 4659)

Address Translation

Address Translation

■ IPv4/IPv4 Address Translation

- Classic NAT/PAT
- NAT 44 (Large Scale NAT - LSN)
 - NAT – the whole access network is behind NAT
- NAT444 (LSN + NAT44)
- A+P (Address + Port)
 - dynamic port sharing on the same IPv4 address

■ IPv4/IPv6 Address Translation

- Enables communication between IPv4-only and IPv6-only devices
- NAT-PT (RFC 2766)
 - deprecated
- NAT64
 - Framework for IPv4/IPv6 Translation (RFC 6144)
 - IPv6 Addressing of IPv4/IPv6 Translators (RFC 6052)
 - DNS64: DNS Extensions for Network Address Translation from IPv6 Clients to IPv4 Servers (RFC 6147)
 - IP/ICMP Translation Algorithm (RFC 6145)

Stateless NAT64

„Stateless“ – no session preservation

- Algorythm for translating between IPv4 and IPv6 addresses
- Each IPv6 address is translated to exactly one IPv4 address
- Only IP and ICMP header is translated

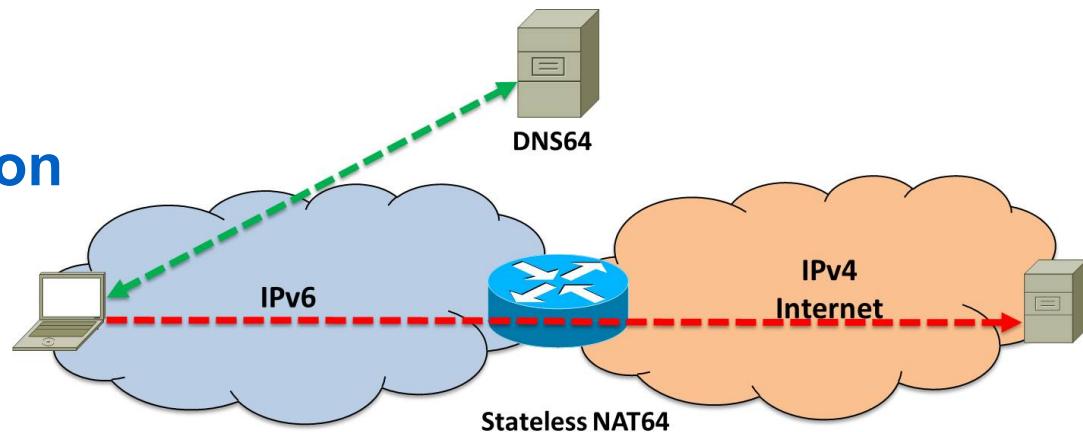

Direction of operation

- IPv6 → IPv4 internet
- IPv4 internet → IPv6
- IPv6 → IPv4
- IPv4 → IPv6

Header fields translation

- Addresses
- Hop Limit ⇔ TTL
- Payload Length
 - Header Length
 - Total Length

PL	0	32	40	48	56	64	72	80	88	96	104
32	Prefix	v4 (32)	u	Suffix							
40	Prefix	v4 (24)	u	(8)	Suffix						
48	Prefix	v4 (16)	u	(16)	Suffix						
56	Prefix	(8)	u	v4 (24)	Suffix						
64	Prefix	u	v4 (32)	Suffix							
96	Prefix										

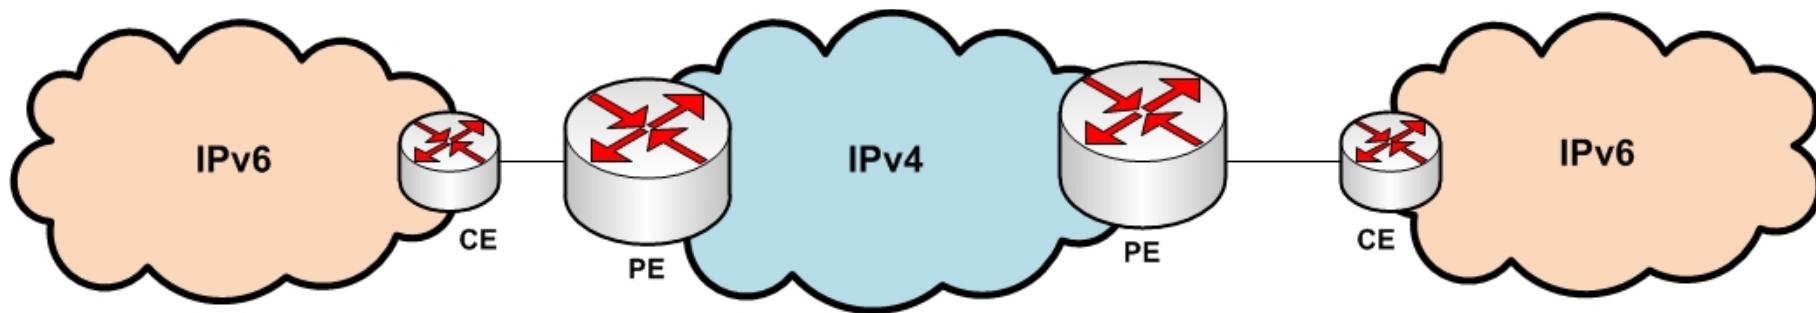

Tunneling

Manual Tunneling

- RFC 2893
 - Transition Mechanisms for IPv6 Hosts and Routers

IPv6

DATA

IPv4

IPv6

DATA

IPv6

DATA

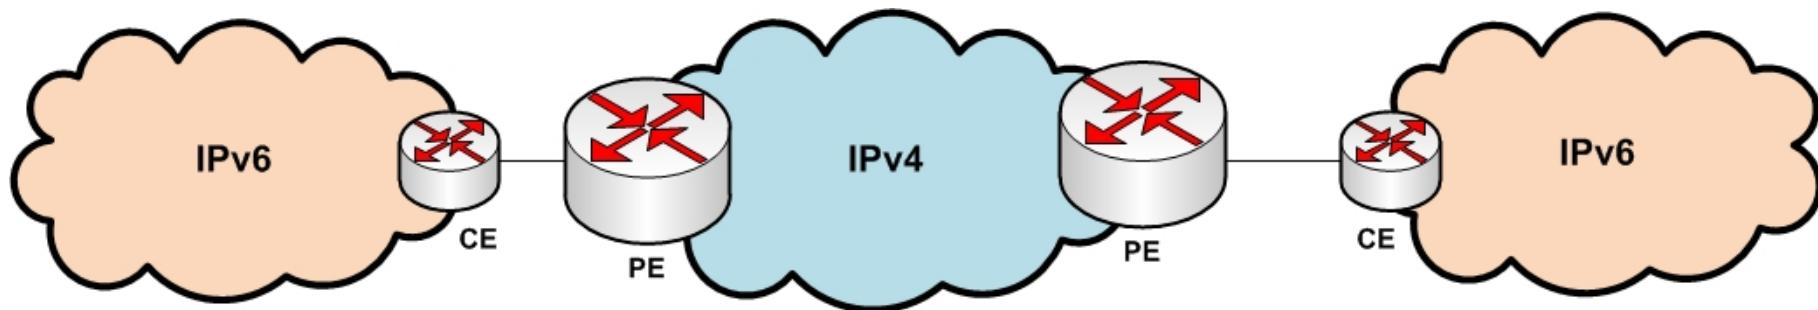

```
interface tunnel 100
ipv6 address 201:300::1/64
(no) ipv6 nd ra suppress
tunnel source 200.15.15.1
tunnel destination 200.13.13.1
tunnel mode ipv6ip
```

```
interface tunnel 100
ipv6 address 201:300::2/64
(no) ipv6 nd ra suppress
tunnel source 200.13.13.1
tunnel destination 200.15.15.1
tunnel mode ipv6ip
```

GRE Tunneling

- RFC 2473
 - Generic Packet Tunneling in IPv6 Specification
- GRE (Generic routing Encapsulation)

```
interface tunnel 2002
ipv6 address 201:300::1/64
tunnel source e0/0
tunnel destination 200.13.13.1
tunnel mode gre ip
```

```
interface tunnel 2002
ipv6 address 201:300::2/64
tunnel source e0/0
tunnel destination 200.15.15.1
tunnel mode gre ip
```

6to4 1/3

■ RFC 3056

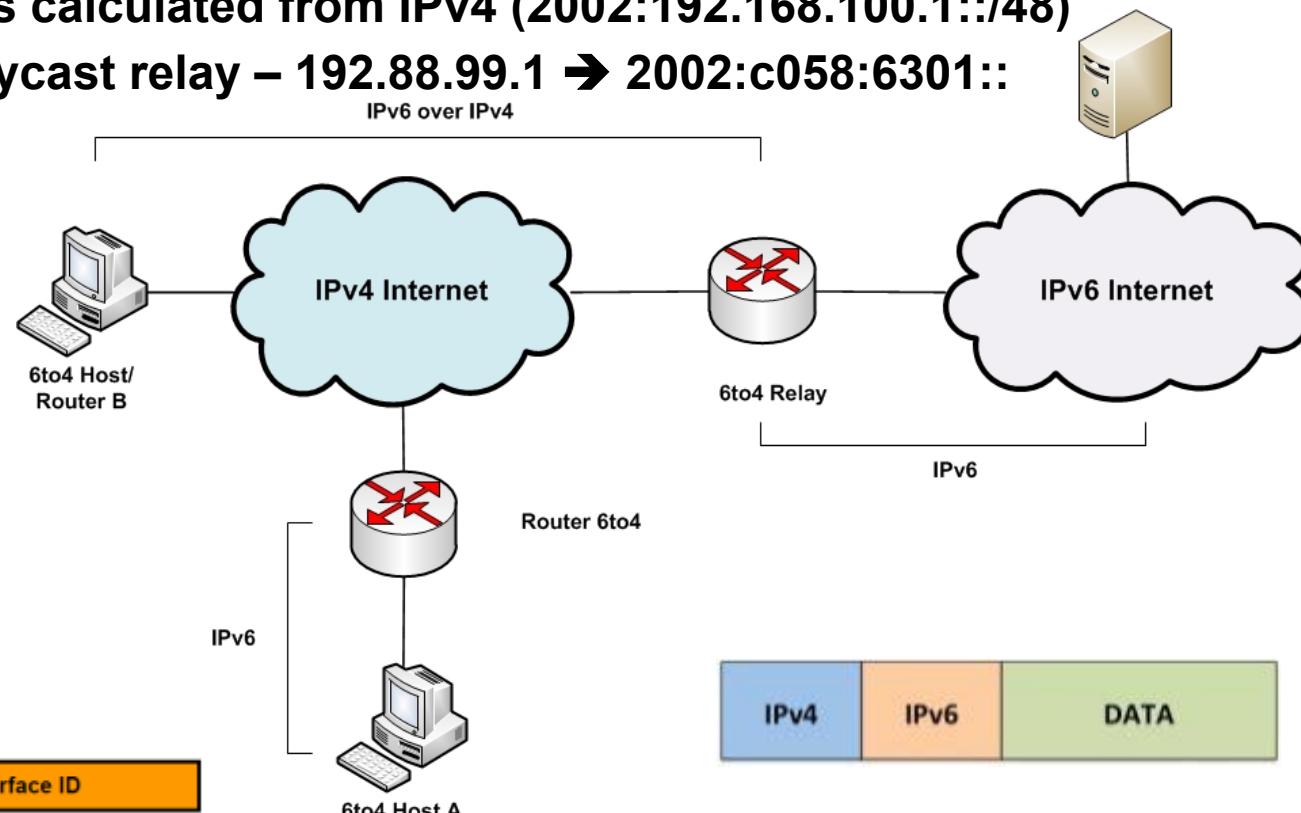

- Connection of IPv6 Domains via IPv4 Clouds

■ Features

- Automatic tunnel provisioning
- IPv6 address is calculated from IPv4 (`2002:192.168.100.1::/48`)
- Public 6to4 anycast relay – `192.88.99.1` → `2002:c058:6301::`
 - (RFC3068)

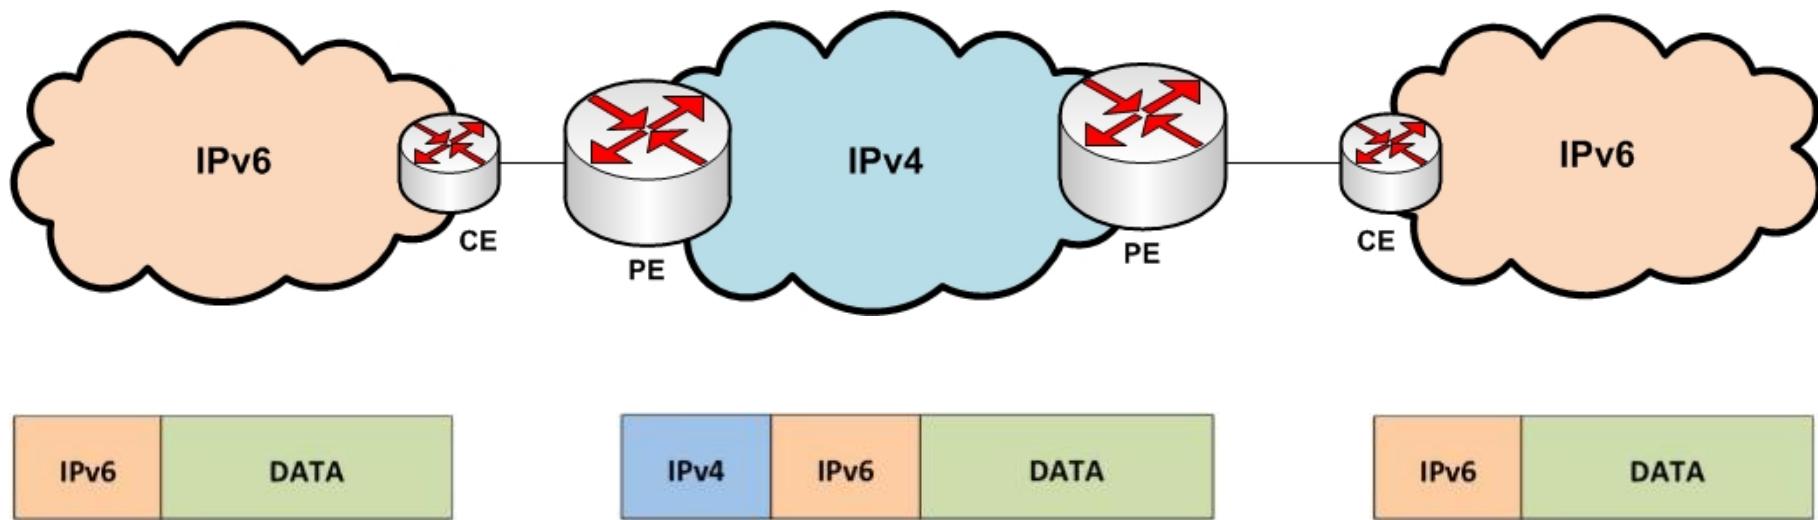

■ Elements

- Hosts
- Routers
- Relays

6to4 2/3

Connecting remote IPv6 LANs

```
interface tunnel 2002
ipv6 address 2002:c80f:0f01::1/128
tunnel source ethernet0/0
tunnel mode ipv6ip 6to4

interface ethernet 0/0
ip address 200.15.15.1 255.255.255.0

interface ethernet 1/0
ipv6 address 2002:c80f:0f01:100::2/64
```

```
interface tunnel 2002
ipv6 address 2002:c80b:0b01::1/128
tunnel source ethernet0/0
tunnel mode ipv6ip 6to4

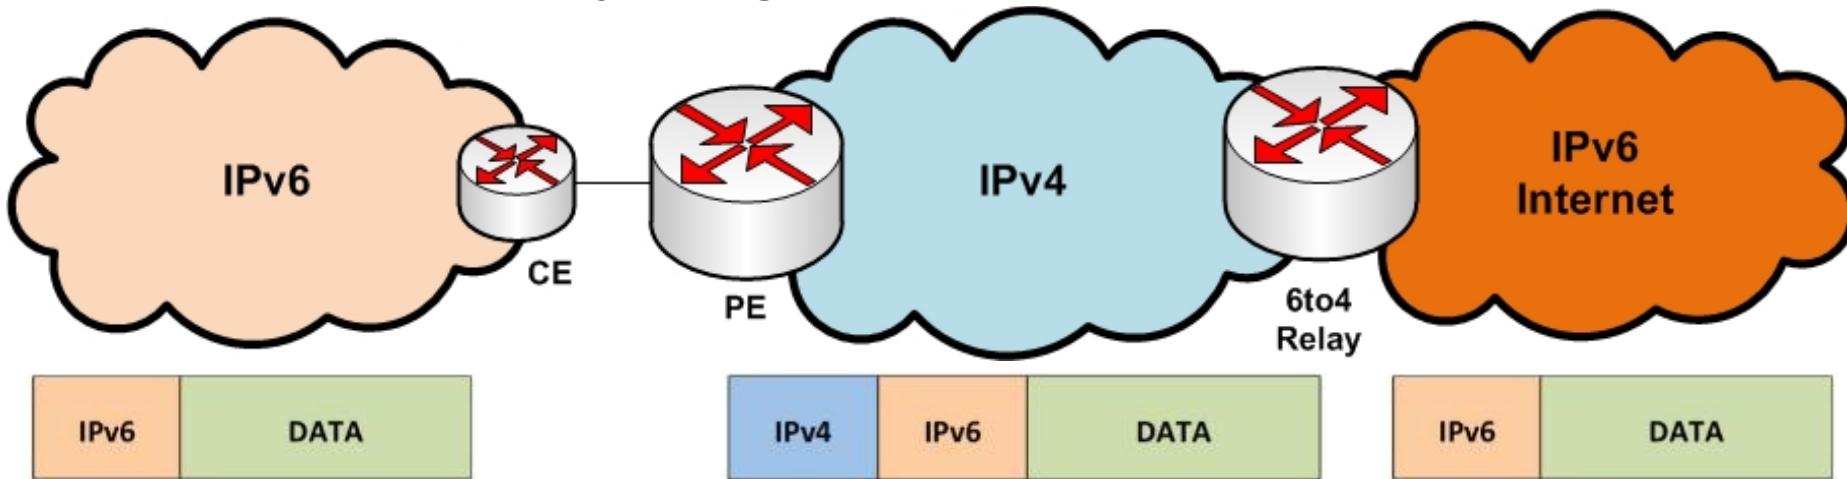

interface ethernet 0/0
ip address 200.11.11.1 255.255.255.0

interface ethernet 1/0
ipv6 address 2002:c80b:0b01:100::2/64
```

6to4 3/3

■ IPv6 Internet Access

■ CE and 6to4 Relay configuration

```
interface tunnel 2002
ipv6 address 2002:c80f:0f01::1/128
tunnel source ethernet0/0
tunnel mode ipv6ip 6to4

interface ethernet 0/0
ip address 200.15.15.1 255.255.255.0

interface ethernet 1/0
ipv6 address 2002:c80f:0f01:100::2/64

ipv6 route 2002::/16 tunnel2002
ip route ::/0 2002:c058:6301::1
```

```
interface Loopback0
ip address 192.88.99.1 255.255.255.0
ipv6 address 2002:c058:6301::1/128

interface tunnel 2002
ipv6 unnumbered Loopback0
tunnel source Loopback0
tunnel mode ipv6ip 6to4

ipv6 route 2002::/16 tunnel2002
```

IPv6 Rapid Deployment (6rd) 1/4

■ RFC 5969

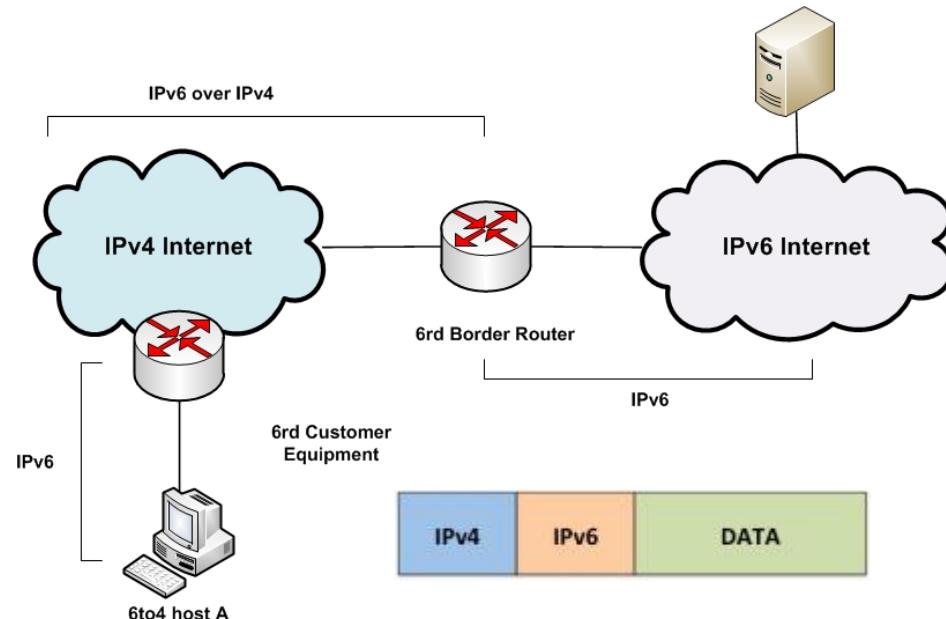

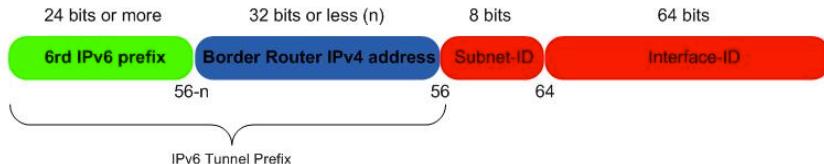

- IPv6 Rapid Deployment on IPv4 Infrastructure (6rd) – Protocol Specification

■ Features

- Automatic tunnel provisioning
- ISP IPv6 address space
- IPv6-only access network

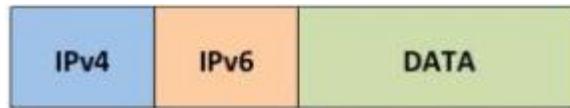

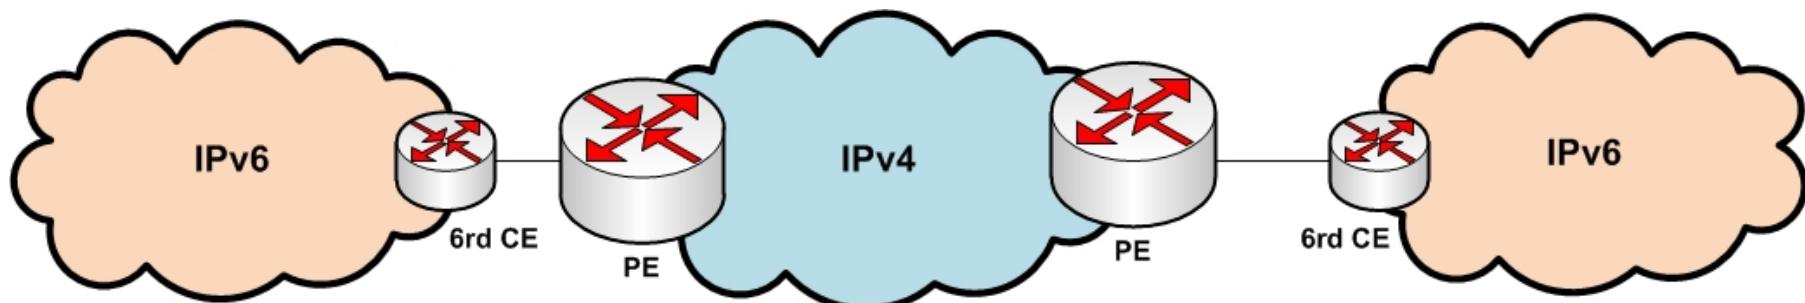

■ Elements

- Hosts
- 6rd Customer Equipment (CE)
- 6rd Border router (BR)

IPv6 Rapid Deployment (6rd) 2/4

Connecting remote IPv6 LANs

```
ipv6 general-prefix 6rd-prefix 6rd Tunnel 1
    ipv6 unicast routing
        ipv6 cef

    interface Tunnel 1
        ipv6 enable
        tunnel source Ethernet 1/0
        tunnel mode ipv6ip 6rd
tunnel 6rd prefix 2001:db8::/32
tunnel 6rd ipv4 prefix-len 16
```

```
interface Ethernet 0/0
    description LAN1
    ipv6 address 6rd-prefix ::1/64

    interface Ethernet 1/0
    description Towards LAN2
    ip address 200:15:15:1 255.255.255.0

    ipv6 route 2001:db8::/32 tunnel 1
```

IPv6 Rapid Deployment (6rd) 3/4

■ IPv6 Internet Access

■ CE configuration

```
ipv6 general-prefix 6rd-prefix 6rd Tunnel 1
```

```
    ipv6 unicast routing
```

```
    ipv6 cef
```

```
Interface Tunnel 1
```

```
    ipv6 enable
```

```
    tunnel source Ethernet 1/0
```

```
        tunnel mode ipv6ip 6rd
```

```
tunnel 6rd prefix 2001:db8::/32
```

```
tunnel 6rd ipv4 prefix-len 16
```

```
        tunnel 6rd br 200.15.0.1
```

```
interface Ethernet0/0
    description Users
    ipv6 address 6rd-prefix ::1/64
```

```
interface Ethernet1/0
```

```
    description ISP
```

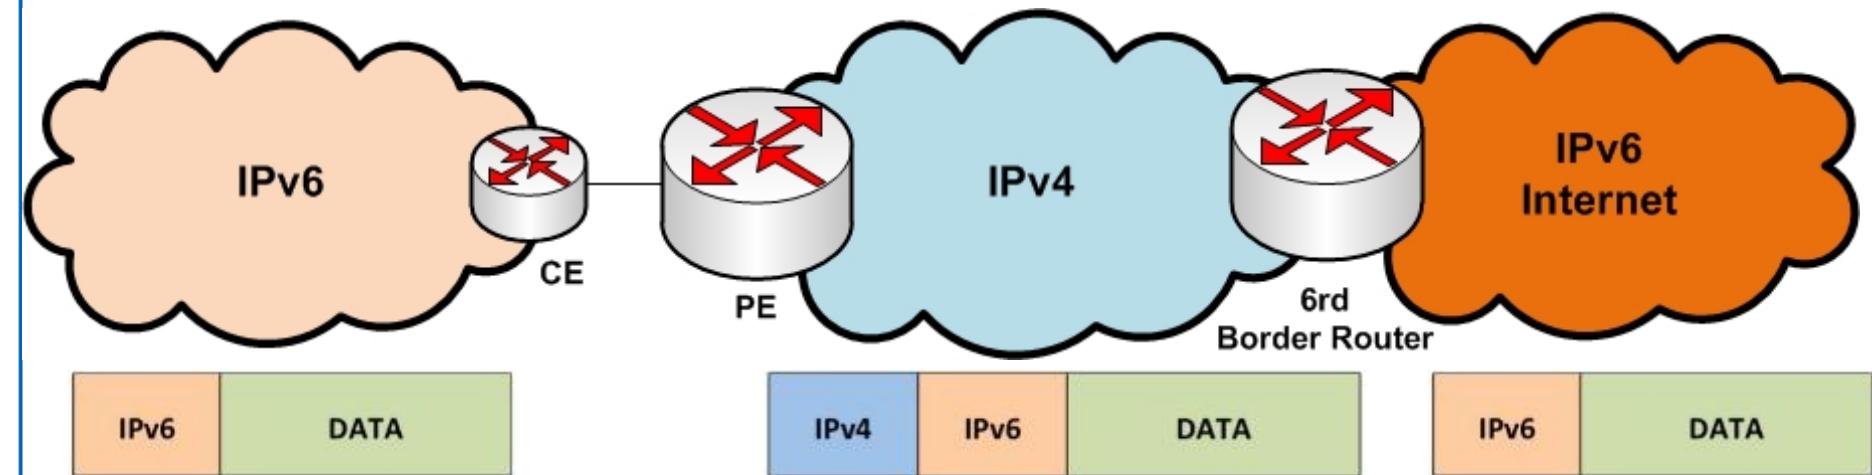

```
    ip address 200.15.15.1 255.255.255.0
```

```
    ipv6 route 2001:db8::/32 tunnell1
```

```
    ipv6 route ::/0 tunnell1 2001:db8:1::
```

IPv6 Rapid Deployment (6rd) 4/4

■ IPv6 Internet Access ■ 6rd BR Configuration

```
ipv6 general-prefix 6rd-prefix 6rd Tunnel 1
```

```
    ipv6 unicast routing
```

```
    ipv6 cef
```

```
Interface Tunnel 1
```

```
    ipv6 enable
```

```
    tunnel source Loopback0
```

```
    tunnel mode ipv6ip 6rd
```

```
tunnel 6rd prefix 2001:db8::/32
```

```
tunnel 6rd ipv4 prefix-len 16
```

```
interface Ethernet0/0
```

```
description IPv6 Internet
```

```
ipv6 address 2001:db9::1/64
```

```
interface Loopback0
```

```
description BR Address
```

```
ip address 200.15.0.1 255.255.255.0
```

```
ipv6 route 2001:db8::/32 tunnell1
```

```
ipv6 route ::/0 2001:db9::2
```

Teredo

■ RFC 4380

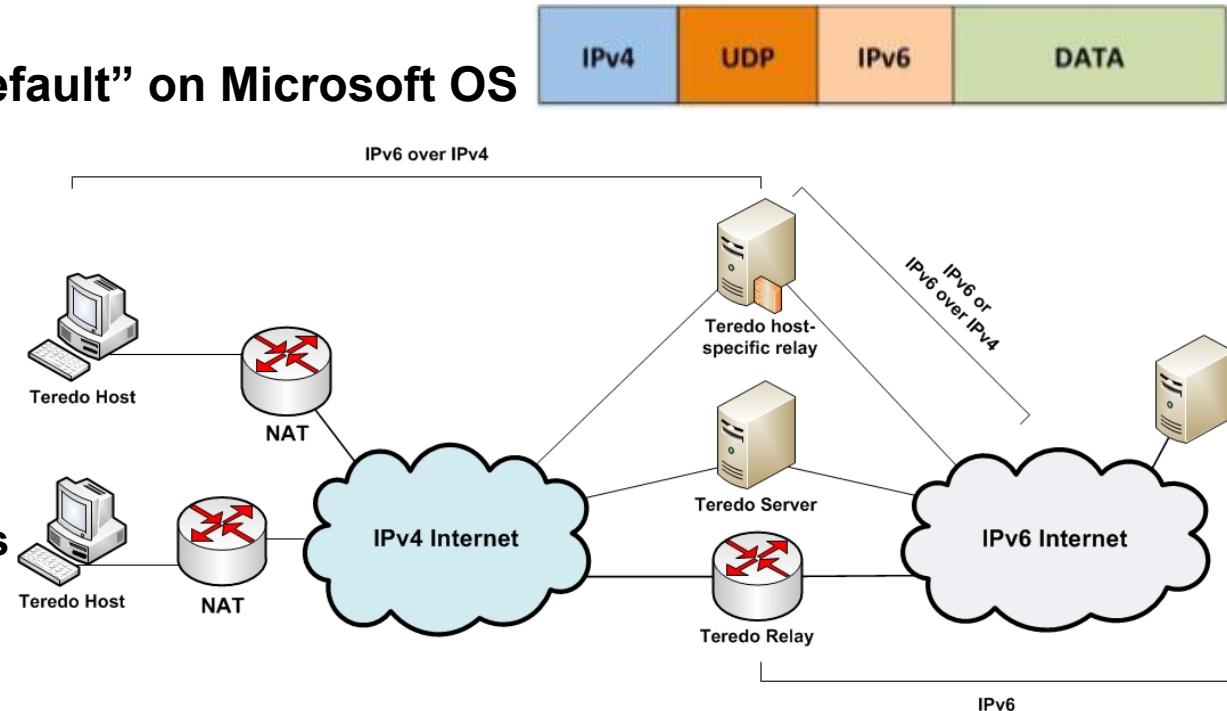

- Teredo: Tunneling IPv6 over UDP through Network Address Translations (NATs)

■ Features

- NAT traversing
- Supported “by default” on Microsoft OS
- Slow
- UDP

■ Elements

- Hosts/servers
- Relays
- Host-specific relays

Teredo prefix 2001:0000	Teredo Server IPv4 Address	Flags	UDP	External IPv4 Address
----------------------------	-------------------------------	-------	-----	--------------------------

ISATAP

■ RFC 5214

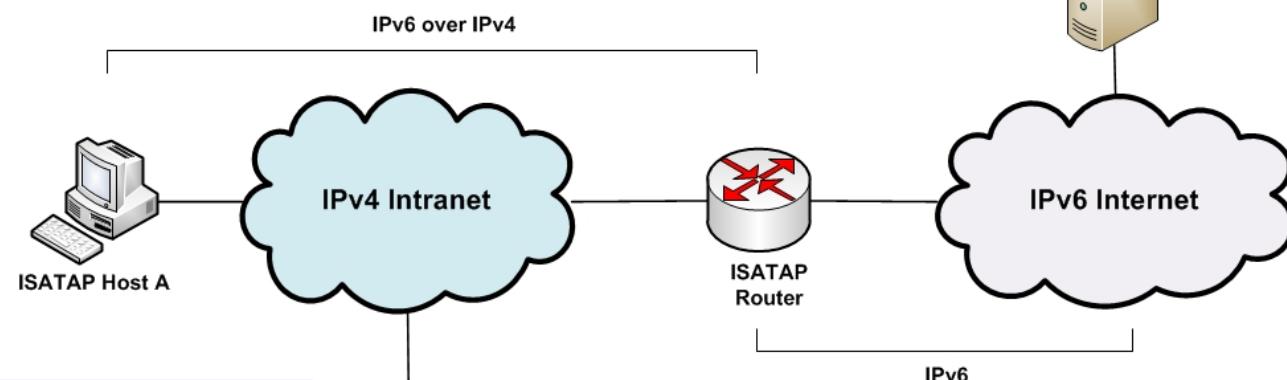

- Intra-Site Automation Tunnel Addressing Protocol (ISATAP)

■ Features

- Corporate & academic environments
- Single administrative domain

■ Elements

- Hosts
- Routers

IPv6 Source	fe80:5efe:10.40.1.29
IPv6 Destination	fe80:5efe:192.168.41.30
IPv4 Source	10.40.1.29
IPv4 Destination	192.168.41.30

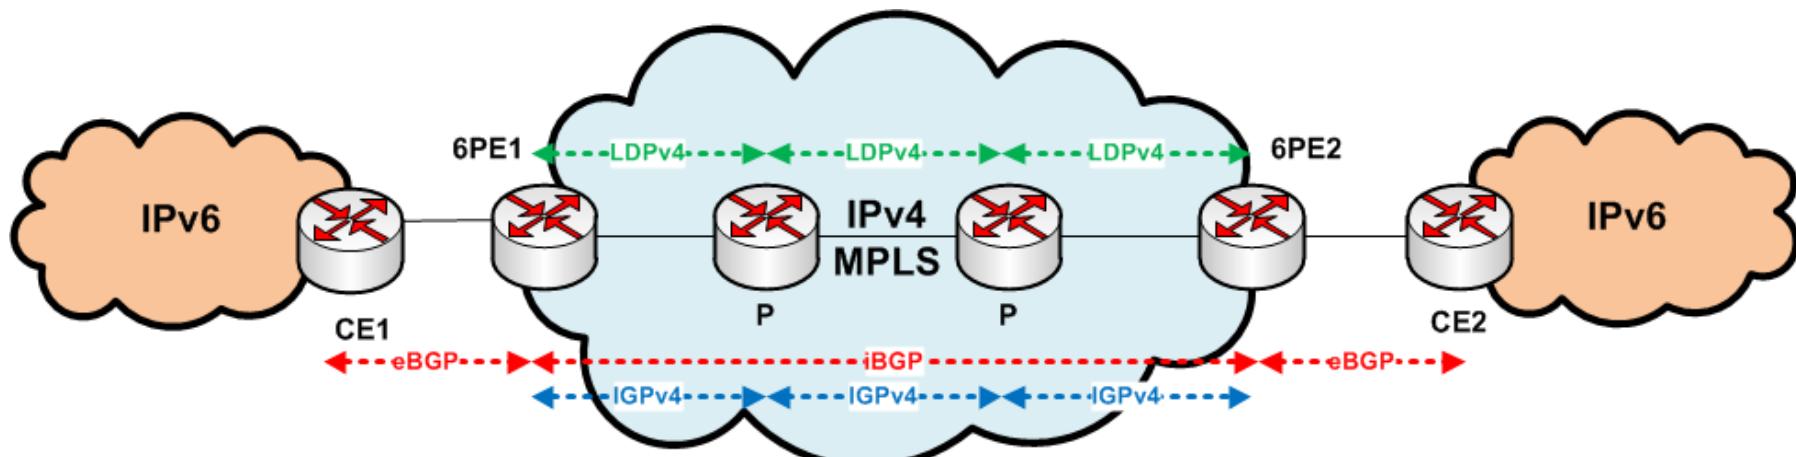

6PE 1/2

■ RFC 4798

- Configuring IPv6 Islands over IPv4 MPLS Using Provider Edge Routers

■ Features

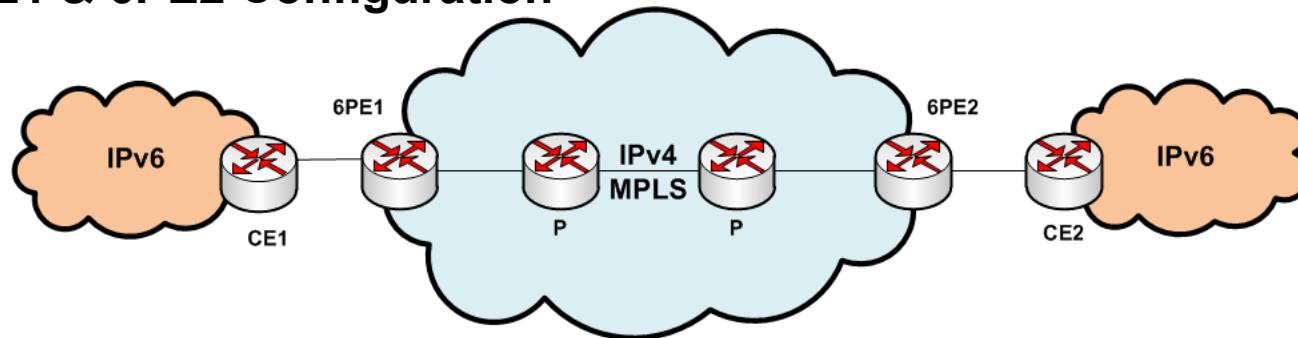

- Core remains IPv4
- Edge devices (6PE) must support dual-stack
- IPv6 packets transported over LSP
- IPv4 Control plane (IGPv4, LDPv4, MP-BGP)
- Fast Re-Route (FRR), Traffic Engineering (TE)

6PE 2/2

■ Connecting remote LANs

■ 6PE1 & 6PE2 Configuration

IPv6

  neighbor 200.11.11.1 activate
  neighbor 200.11.11.1 send-label
```

ipv6 cef

```
interface loopback0
ip address 200.11.11.1 255.255.255.0
```

```
router bgp
neighbor 2001:db8:1::1 remote-as 65015
  neighbor 200.10.10.1 remote-as 100
  neighbor 200.10.10.1 update-source lo0
```

```
address-family ipv6
  neighbor 200.10.10.1 activate
  neighbor 200.10.10.1 send-label
```

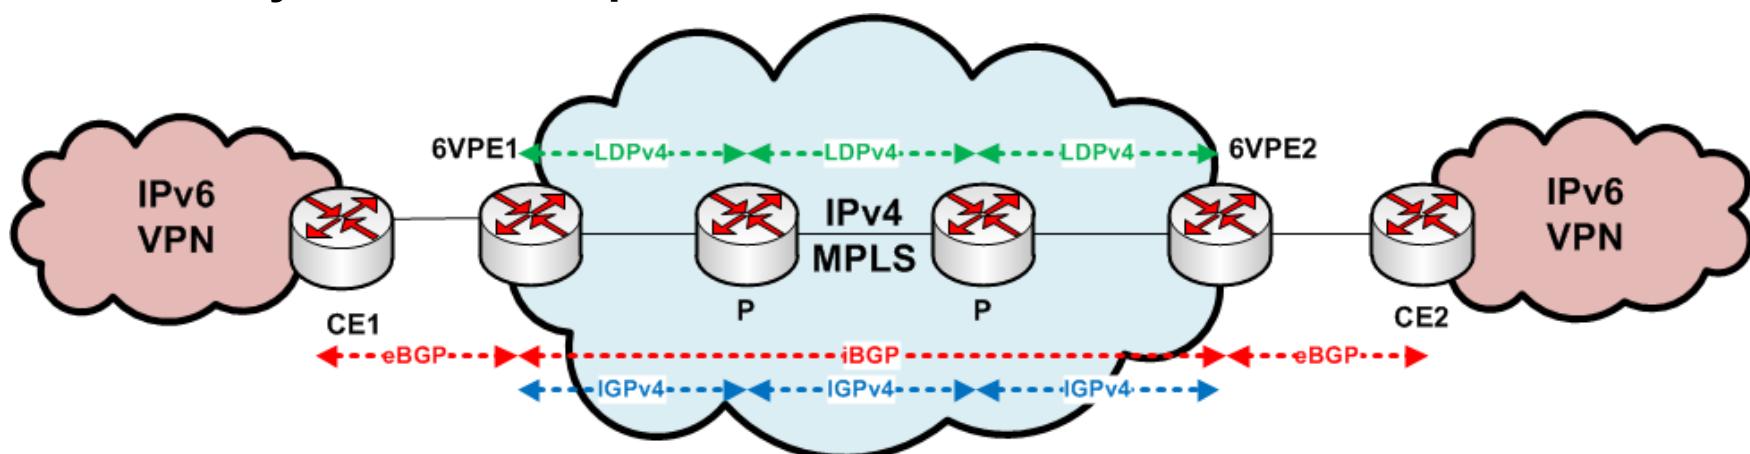

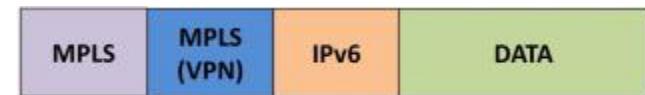

6VPE 1/5

■ RFC 4659

- BGP-MPLS IP Virtual Private Network (VPN) Extension for IPv6 VPN

■ Features

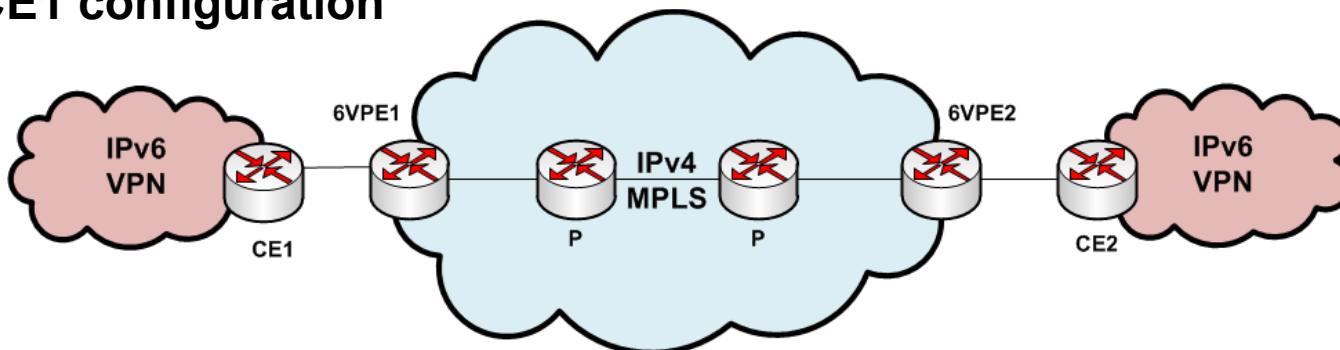

- IPv6 VPN provisioning over IPv4/MPLS
- Edge devices (6VPE) must support dual-stack
- Same MPLS VPN features as for IPv4
 - VRF, RT, RD
 - MP-NGP
- Mainly used in enterprises

6VPE 2/5

Connecting remote IPv6 VPN LANs

```

Operator & ISP networks

Goal

■ Native IPv6

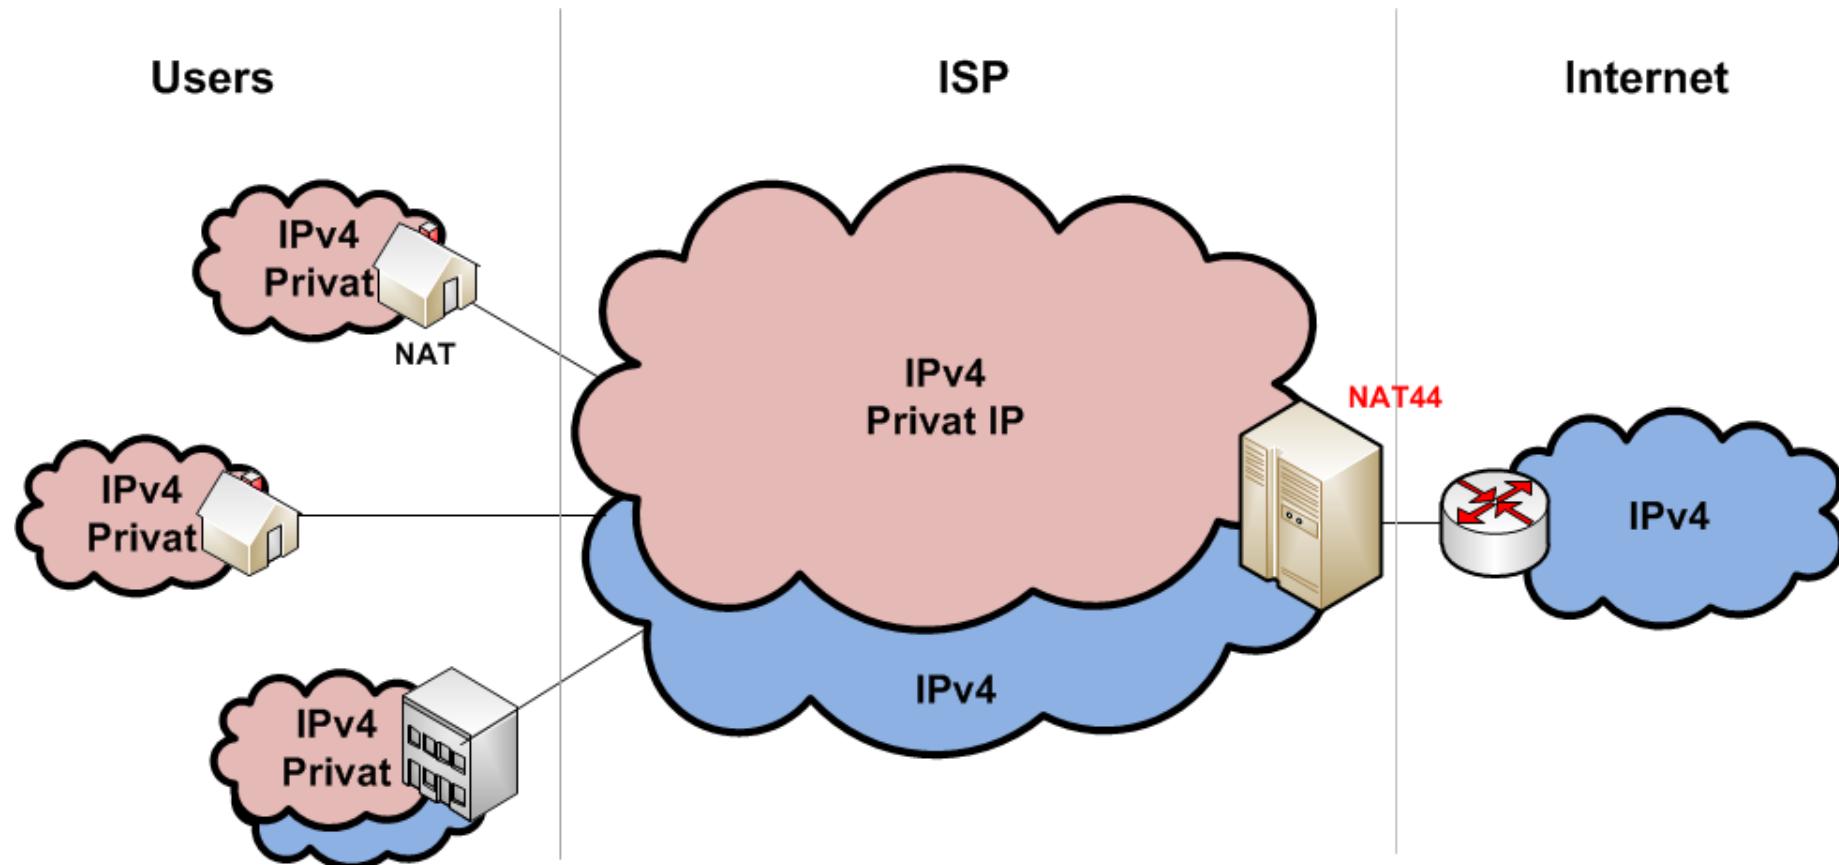

- Access
- Aggregation
- Core

Access 1/4

- NAT 44 (Large Scale NAT)
 - Holding on to IPv4

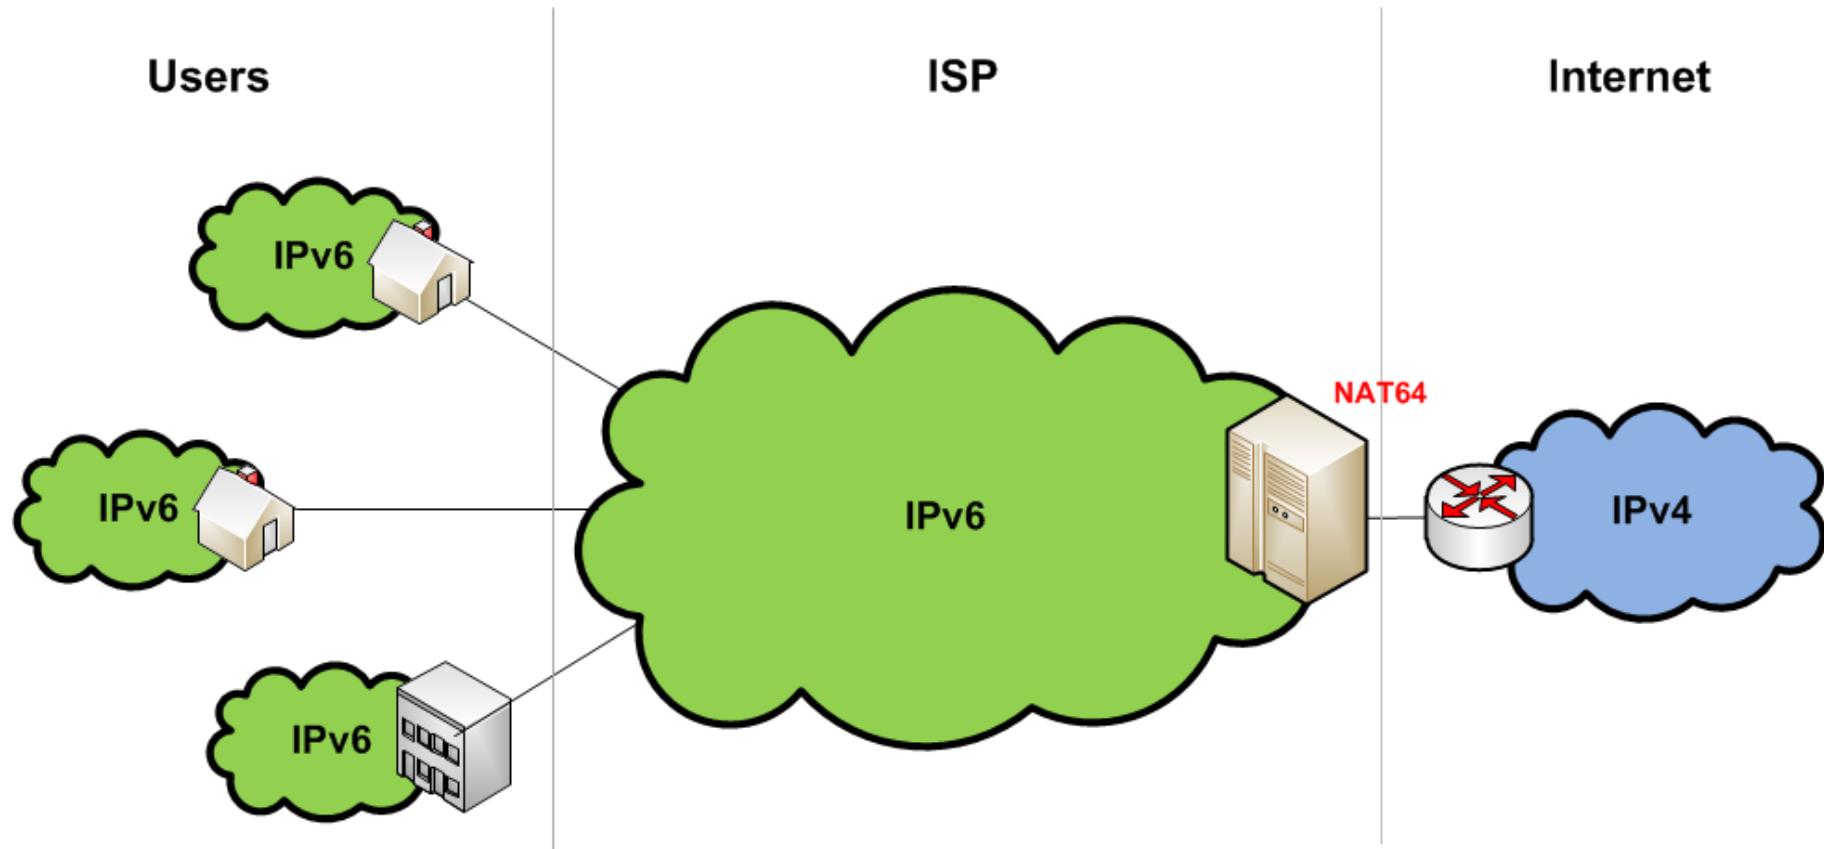

Access 2/4

■ NAT64

- AFT – Address Family Translation
- Stateless NAT64
 - Cisco

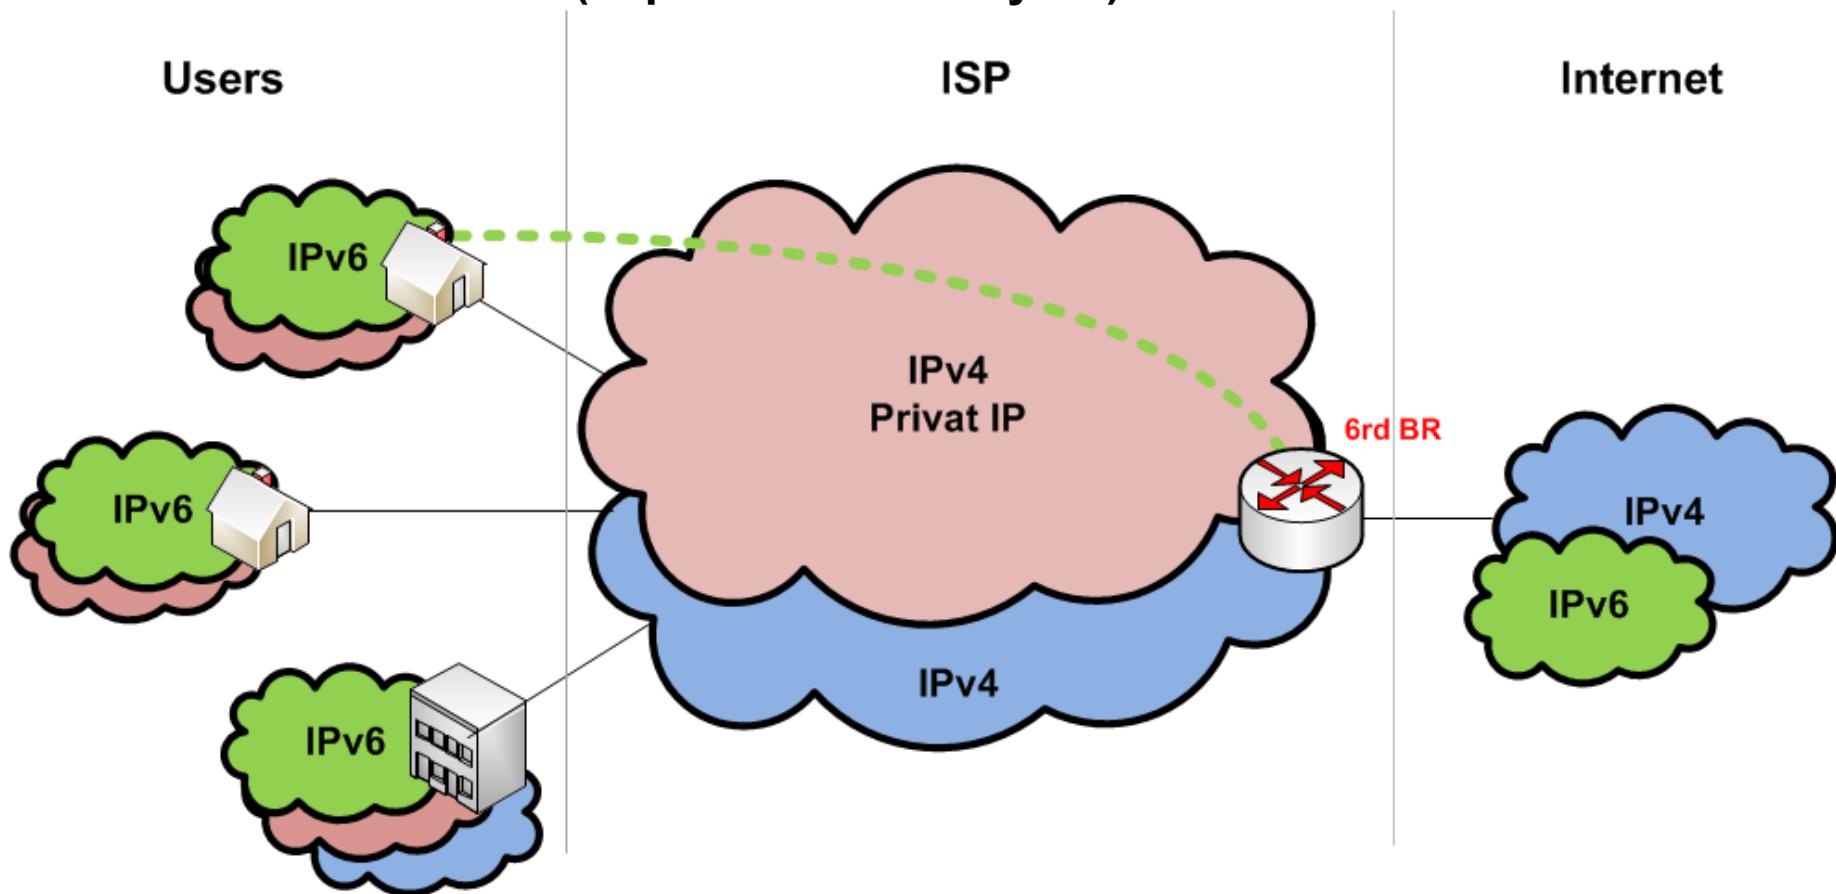

Access 3/4

■ 6rd

- IPv6 Rapid Deployment
- Swiss Telecom (in production this year)

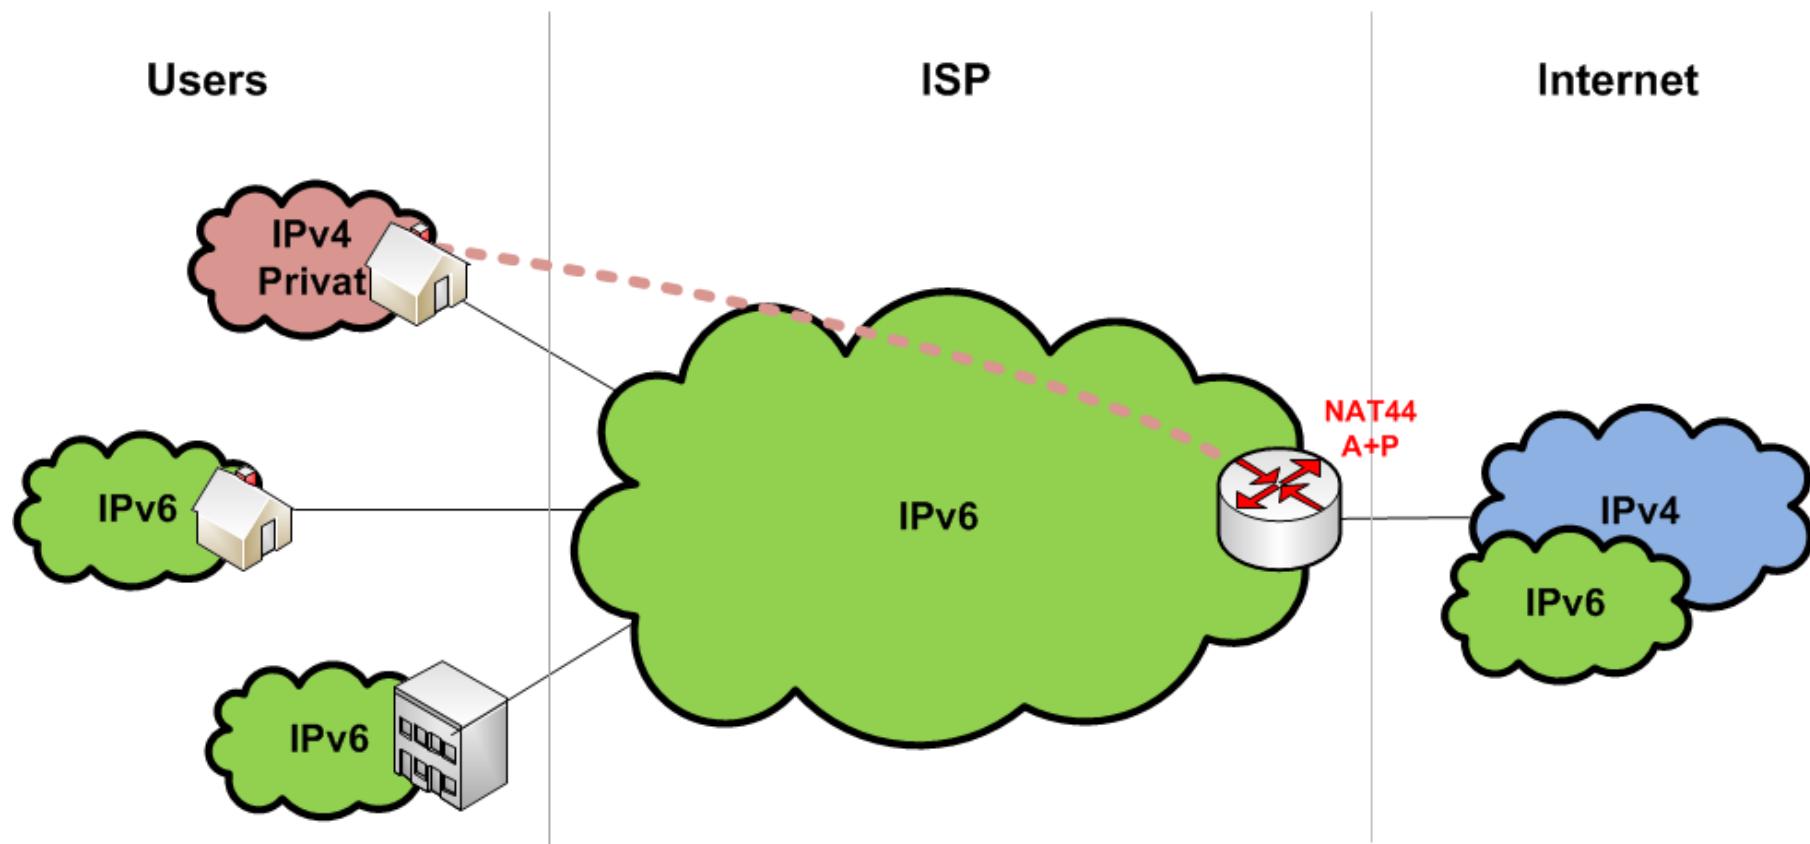

Access 4/4

DS-Lite

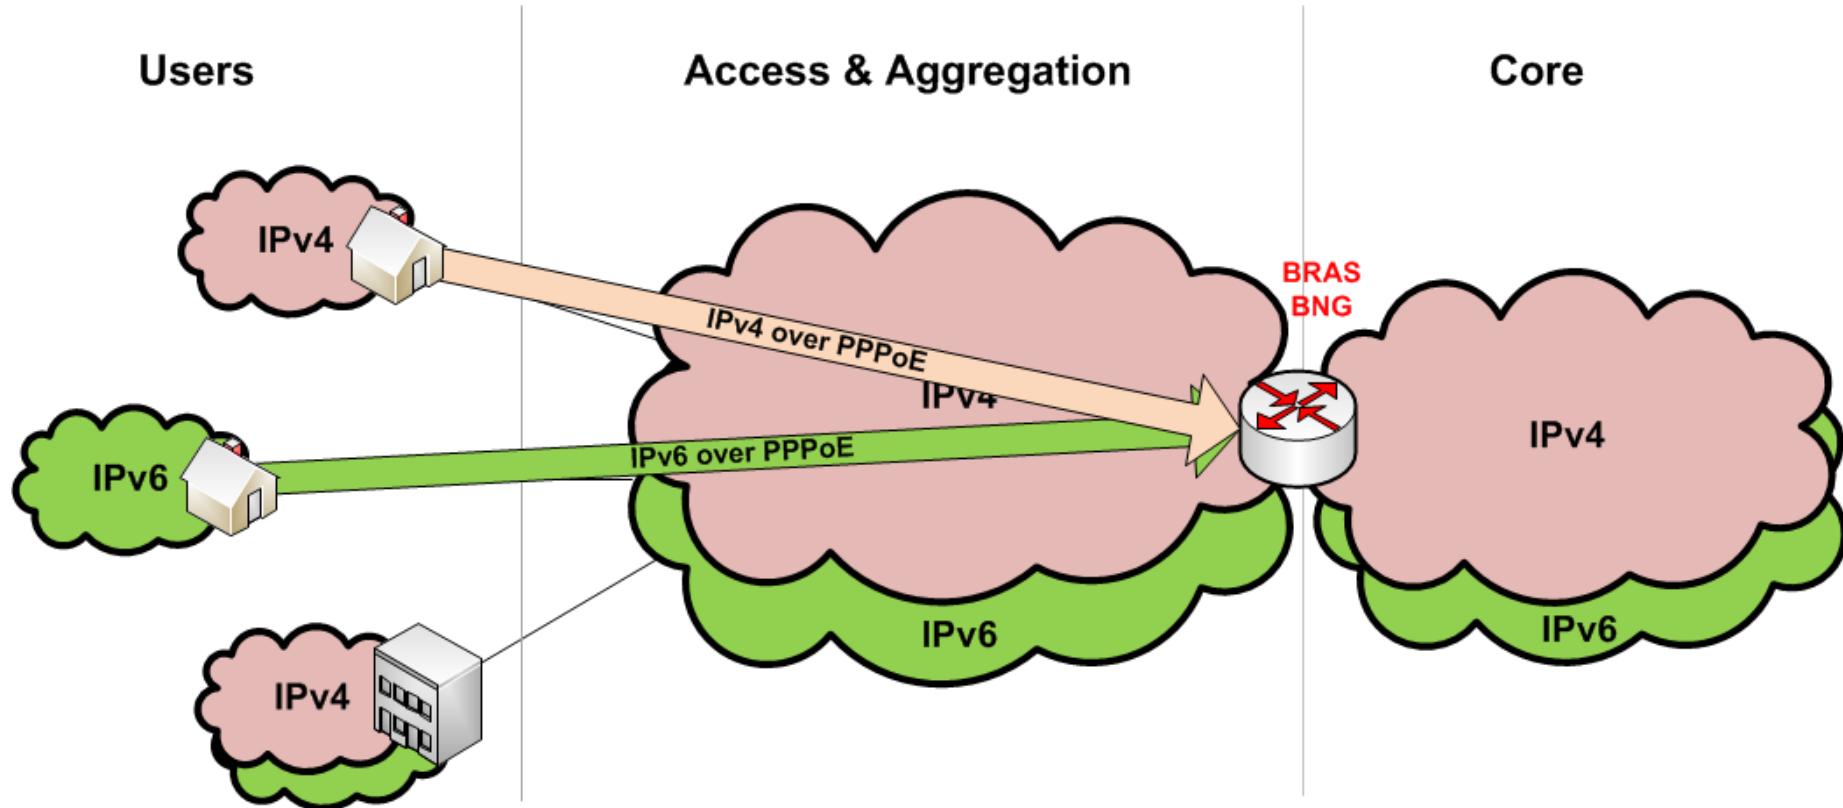

- Dual-Stack Lite
 - NAT 44
 - A+P

Access - PPPoE 1/3

- RFC 2472
 - IP version 6 over Point to Point Protocol (PPP)
- PPPoE
 - PPP over Ethernet

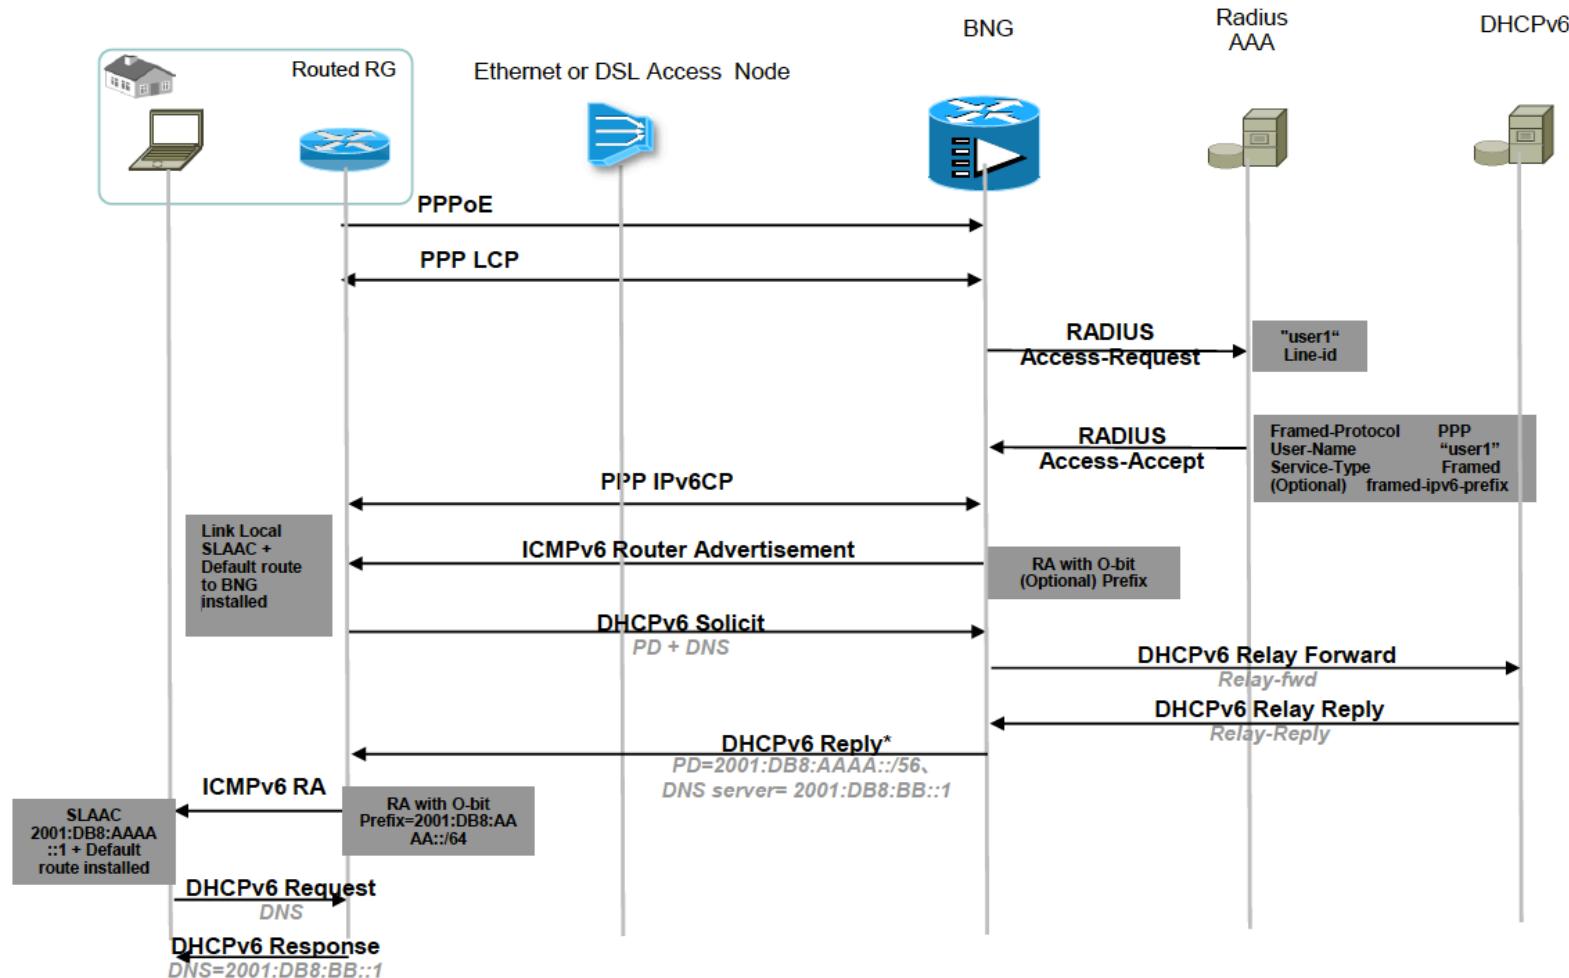

Access - PPPoE 2/3

- IPv6 over PPPoE
 - Lack of CPEs that support IPv6 over PPPoE
- CPE
 - Dual-stack IPv4/IPv6
- Access and aggregation
 - No upgrade required
- Core
 - IPv4/IPv6
- Addressing subscriber devices
 - SLAAC (Stateless Address Autoconfiguration)
 - DHCPv6-PD

Access - PPPoE 3/3

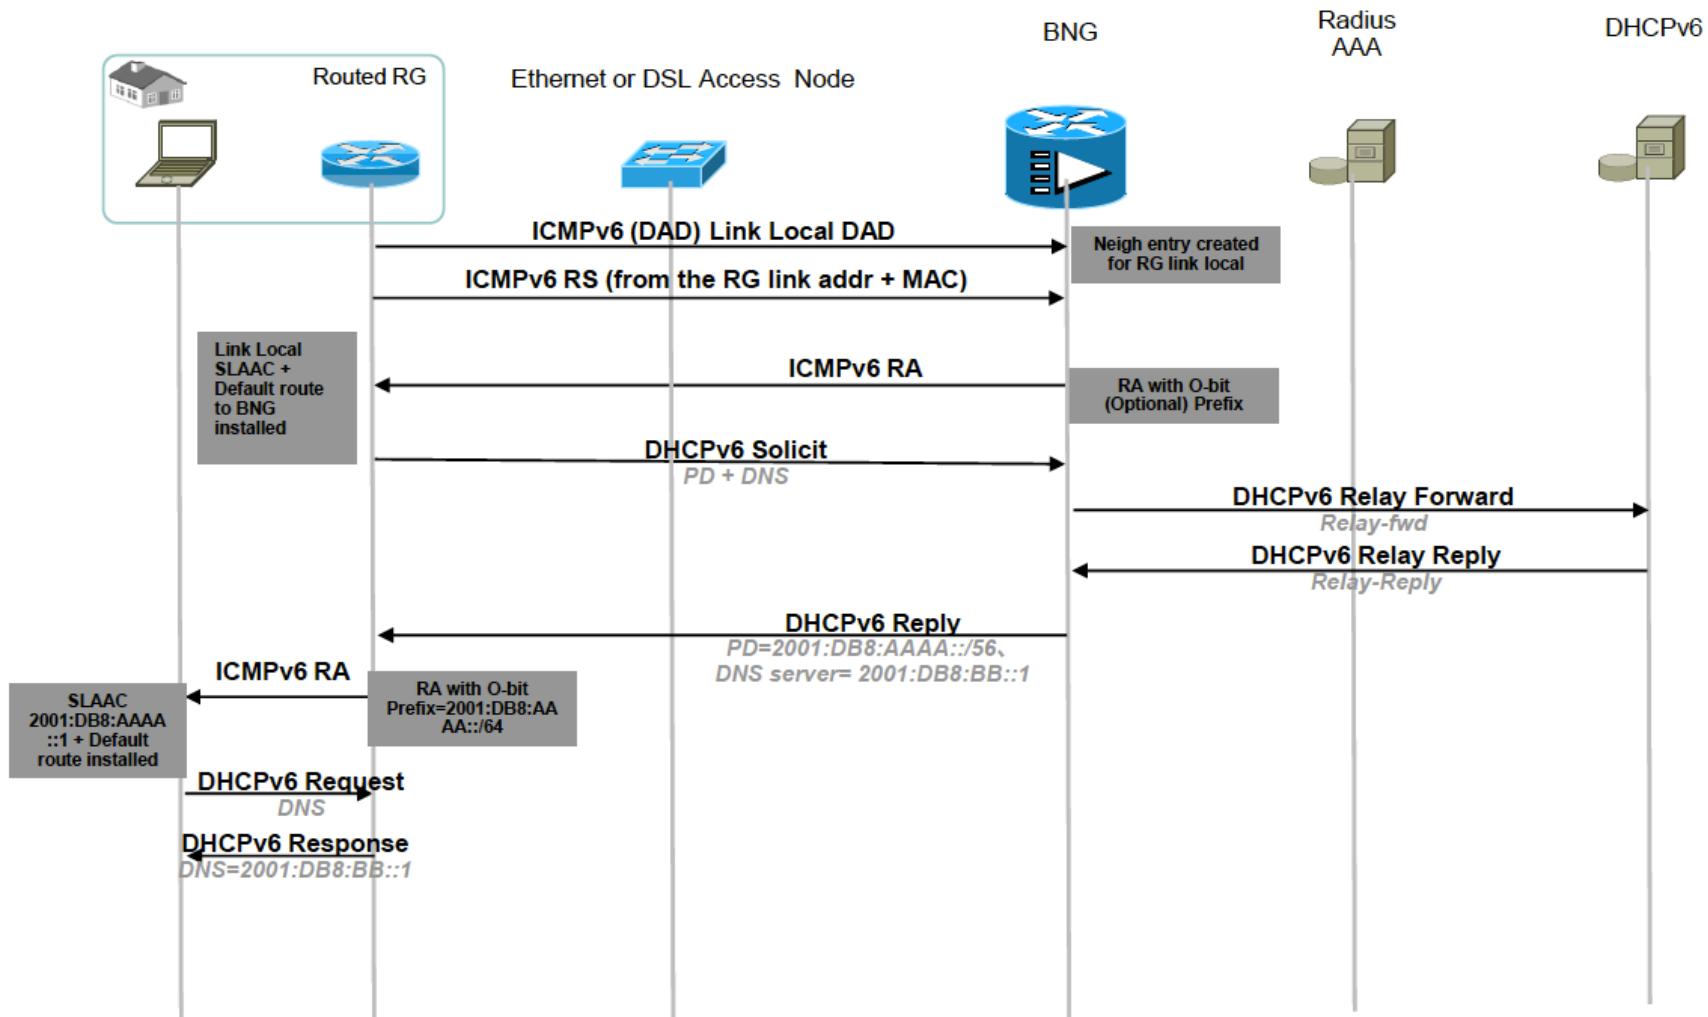

Basic authorization and DHCP-PD

Source: Cisco

Access - IPv6oE 1/2

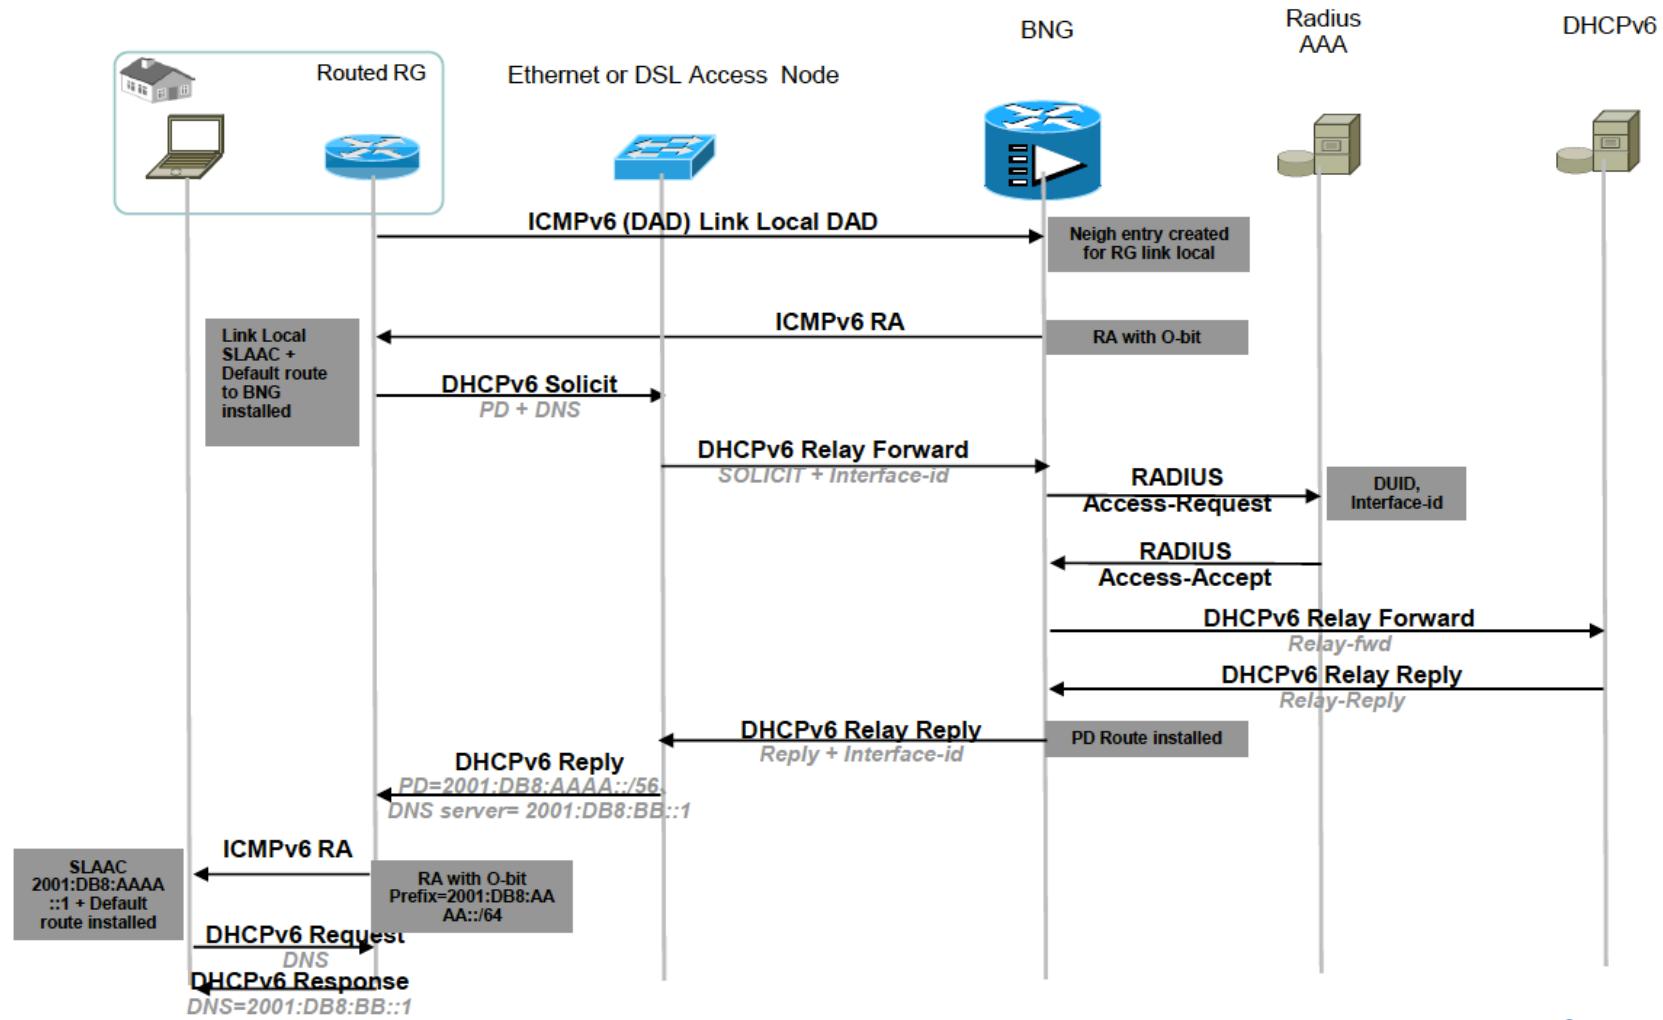

■ 1:1 VLAN + DHCP-PD

Source: Cisco

Access - IPv6oE 2/2

N:1 VLAN + DHCP-PD + AAA

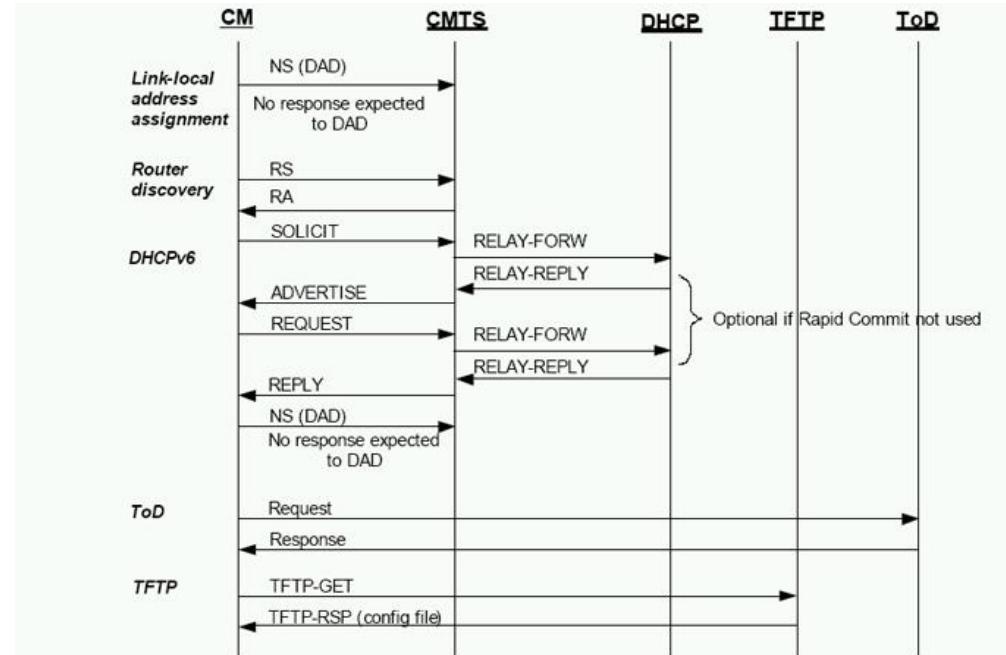

Source: Cisco

Cable Access

- IPv6 in cable networks exists for some time now
 - Lack of IPv4 private address space IPv4 (big cable operators)
- DOCSIS 3.0
 - IPv6 on CM (Cable Modem)
 - IPv6 on CMTS (Cable Modem Termination System)
 - IPv6 on terminal devices
 - Addressing
 - SLAAC
 - DHCPv6

Core 1/3

■ IPv4

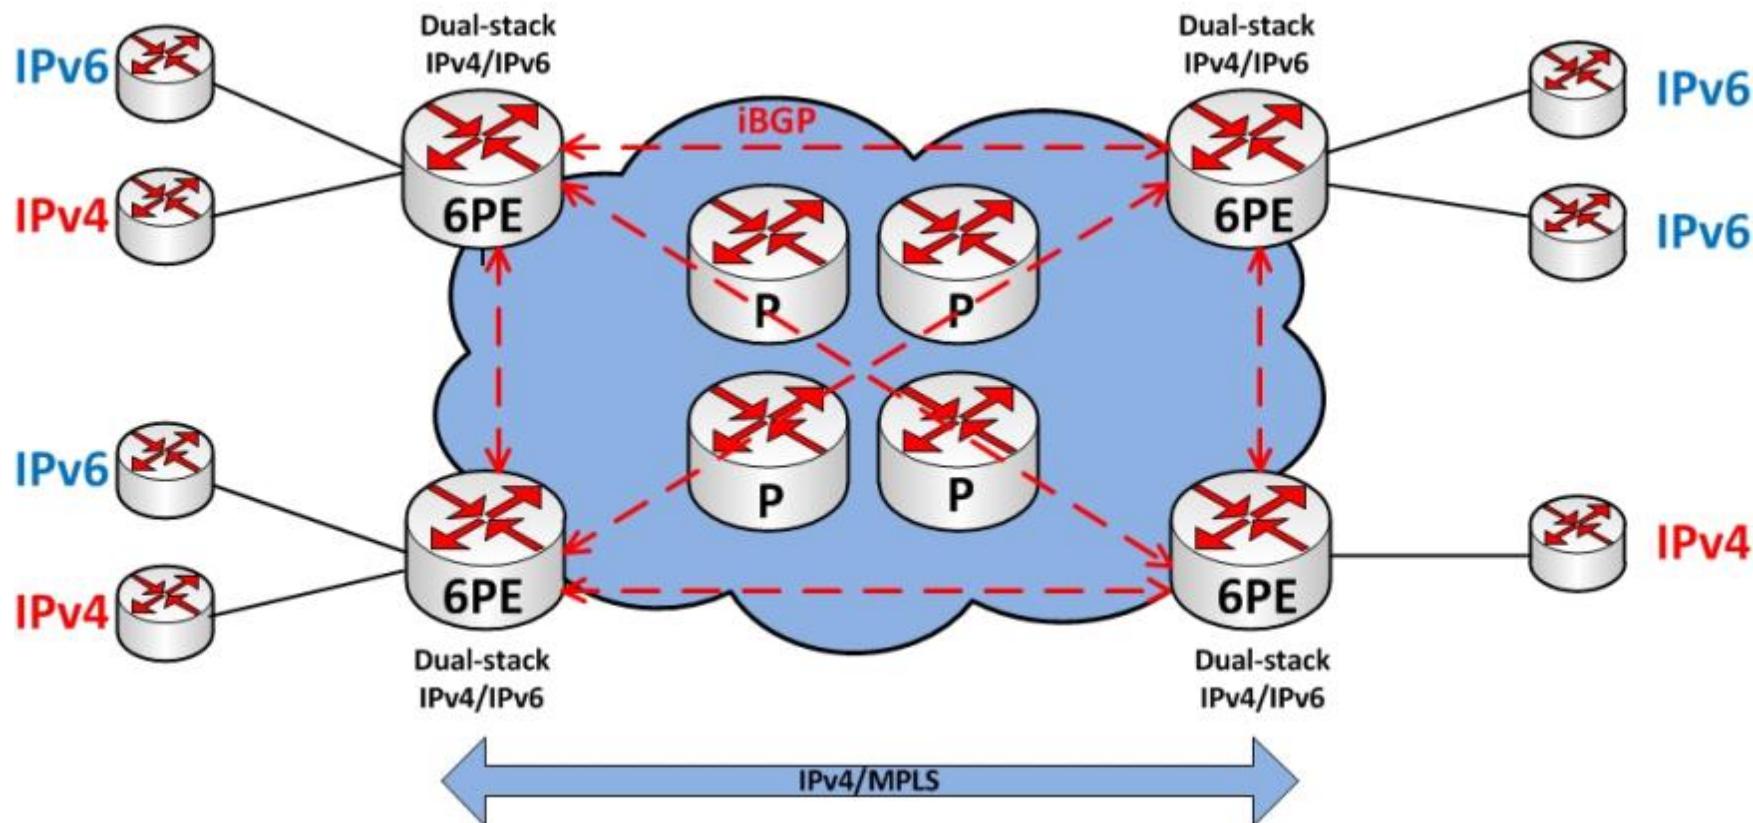

- Separated IPv6 network (new devices)
- IPv6 tunneling
 - IPv6 over IPv4 (RFC 2893)
 - GRE (RFC 2473)
 - L2TPv3
- Dual-stack core devices
 - Careful planning with network resources!

■ MPLS

- “Native” IPv6 MPLS
 - Poor support
- IPv6 over AToM (Any Transport over MPLS)
- IPv6 provider edge router (6PE) over MPLS
- IPv6 VPN provider edge (6VPE) over MPLS

Core 2/3

- IPv6 Provider Edge Router (6PE) over MPLS
 - Edge devices (PE) are “dual-stack”, core remains IPv4/MPLS

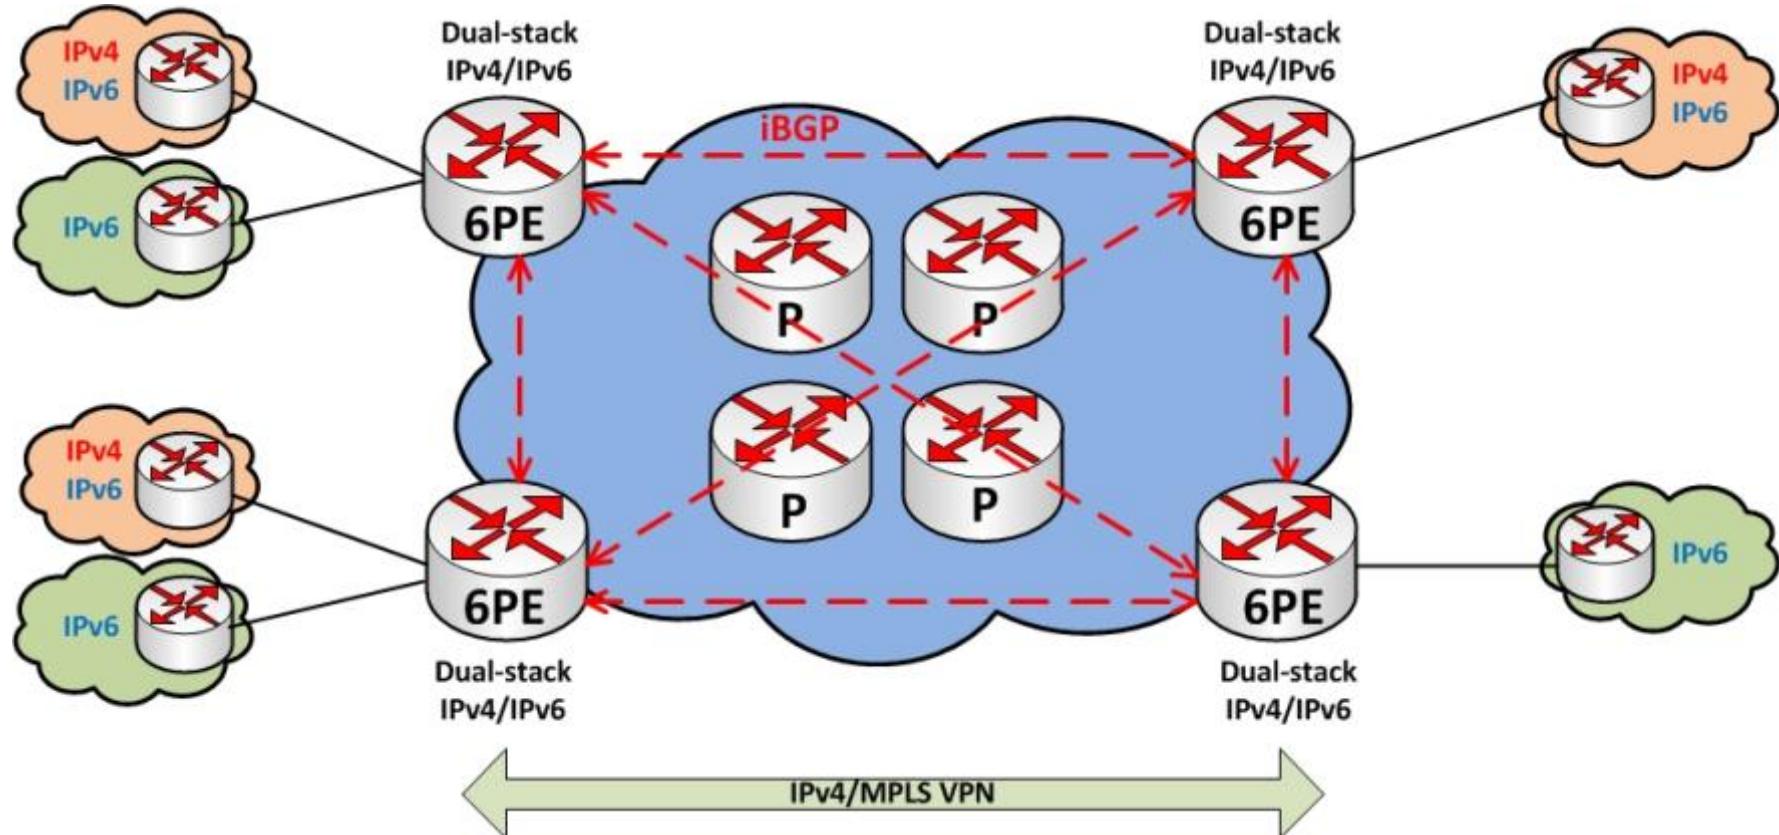

Core3/3

■ IPv6 VPN provider edge (6VPE) over MPLS

- BGP/MPLS VPN + 6PE ☺
- Core remains IPv4/MPLS

Thank you!
