BGP Operations and Security Training Course

RIPE TEST Database

Appendix
Introduction

Your database objects

For your convenience we have already created some objects in the RIPE TEST Database. You can use these objects during the practical exercises today. During the exercise, you can modify these or use them to update or create other objects.

We have created a maintainer, person and organisation object for you. There are also an IPv4 and IPv6 allocations.

To identify your objects, please look up your number in the attendees’ list and substitute that in the placeholders. As an example, if your number on the list is 3, your person object will be TP3-TEST. On the next pages you will find the list of all your objects that are in the RIPE TEST Database.

RIPE TEST Database

In the exercises, we will make use of the RIPE TEST Database. This is a public system that acts and responds in exactly the same way as the RIPE Database would do.

You can access the RIPE TEST Database under address:

https://apps-test.db.ripe.net

Passwords

All your objects are protected by your own maintainer object. In order to modify any of them, you will need the password for this maintainer.

This password is “secret” + your number, so the password for attendee 1 will be secret1, the password for attendee 2 will be secret2, and so on.

You will also need need RIPE NCC Access account to be able to create objects in RIPE TEST Database.
Your objects

Fill in all placeholders with your number on the list

person: Training Course Participant

remarks: RIPE NCC training courses - Participant Person

address: Singel 258

address: 1016 AB Amsterdam
